

Latest CDC Data Shows That Vaccinated Children Aged 5-11 Are Now MORE Likely to Catch Covid Than Their Unvaccinated Peers

After approving the experimental mRNA jab for children as young as five a few months back, the tyrannical US Public Health Regime is pushing ahead with its plan to vaccinate even younger children despite mounting evidence that the jab may actually be facilitating the spread of the virus among them.

Not to even mention the numerous and life-threatening side effects, like myocarditis and bells palsy, that frequently manifest after receiving the experimental mRNA jab.

According to the **latest data** from the US Center for Disease Control (CDC), the Covid infection rate among vaccinated children aged 5-11 is **now higher** than it is among their unvaccinated peers for the first time since the data started being collected.

The flip has been in the making for months, as the infection rate for vaccinated children has been creeping closer to the rate of unvaccinated cases for quite some time, eventually surpassing the latter in the week ending on Feb 19th.

That week, which is the latest **available data**, the rate of Covid cases detected in children aged 5-11 was 122 per 100,000 for the unvaccinated and 131 per 100,000 for the vaccinated.

Just one week earlier, the rate was 248 and 244 per 100,000 for the unvaccinated and vaccinated respectively.

And a month prior, the infection rate was nearly 1,800 per 100,000 in unvaccinated and over 1,340 per 100,000 in the vaccinated during the week ending Jan. 15.

So, despite a meteoric drop-off in cases – over 10x in just a month – the vaccinated case rate left above the case rate for the unvaccinated.

What's most concerning though, especially with the Federal Government's continued push to vaccinate younger and younger children, is that the most recent data on 5-11-year-olds shows that they, among all other vaccinated age groups, had the highest infection rate in the US.

As for hospitalizations and deaths, the CDC also tracks those cases by vaccinated and unvaccinated categories, but the agency does not publish the data for 5-11-year-olds, due to “low numbers,” so there is no information available in that regard, **according** to The Epoch Times.

Somehow, despite all of the serious red flags surrounding this vaccine – it doesn’t even stop the spread of the virus (as evidenced by the boosters, let alone the poor results) – the Fauci-led Public Health ‘experts’ are preparing to authorize a fourth dose of the experimental jab and are working to greenlight the vaccine for infants and toddlers.

It’s pure evil.

“Final Frontier:” Moderna Begins Testing Experimental Covid Jab on Infants as Young as 6 Months Old

As several actual experts have been warning for months, this is the most dangerous vaccine ever to be released to the public. In just under a year and a half in circulation, VAERS has logged over a million cases of adverse side effects from the mRNA Covid vaccine, including over 26,000 deaths, 14,827 cases of Bells Palsy, 37,133 cases of Myocarditis/Pericarditis, and 48,342 reports of permanent disability, among others.

The sheer number of reports, especially those of a serious nature, is an astounding number and completely unprecedented for any other vaccine. In the past, vaccines would be pulled if they were linked to double-digit deaths, let alone tens of thousands.

From OpenVaers:

And broken down to only include children. Note the chart on the bottom – VAERS reports in this age range for 2021 are double any other year recorded and almost 10x the number from 2020 – what changed? The introduction of mRNA vaccines:

Keep in mind, this virus has a 99.95-99.99% recovery rate – and with children or young people, it’s even higher. So forcing this experimental jab on them is completely criminal and pure evil.
