

Pandemic of The Vaccinated: The Most Vaccine Compliant Areas of the US Experience a Significantly Higher Rate of Covid Infections Than the Least Vaccinated Areas

An **analysis** of CDC data by **The Epoch Times** reveals that the most vaccinated areas of the United States are experiencing the highest numbers of covid cases – and it’s not just by a little bit. The infection rate is significantly higher than in the areas where vaccine compliance is lowest.

In other words – the data indicates that, at best, the vaccines don't work; and at worst, they are contributing to the spread of the virus.

According to The Epoch Times [analysis](#), the Covid infection rate in US counties that have a vaccination rate of 62-95% is 23% higher than the Counties that have a vaccination rate of just 11-40%.

From [The Epoch Times](#):

“The 500 counties where 62 to 95 percent of the population has been vaccinated detected more than 75 cases per 100,000 residents on average in the past week. Meanwhile, the 500 counties where 11 to 40 percent of the population has been vaccinated averaged about 58 cases per 100,000 residents.”

The data showed that the least vaccinated counties tended to be on the smaller side, with an average population of around 20,000 – much less than the 330,000 average among the most vaccinated counties.

This massive difference in size could lead some to believe that this is what explains the higher infection rate – more people coming and going, more transmission, etc.

However, the same jump in Covid cases was seen even when the population was factored in as part of the analysis. In fact, the increase was even more pronounced when population was controlled for.

In counties with a population of over 1 million people, the case rate was 27% higher 10 most vaccinated counties, when compared to the 10 least.

And it doesn't stop there. When broken down by counties with a population of 200,000-500,000 – again looking at the 10 most and least

vaccinated – the increase doubles to 55%.

Even more unbelievably, US Counties with 100,000-200,000 covid cases were a whopping 200% higher, under the same comparison.

From the Epoch Times:

“In counties with populations of 200,000 to 500,000, the 10 most vaccinated had case rates around 55 percent higher than the 10 least vaccinated.

The difference was more than 200 percent for counties with populations of 100,000 to 200,000.

For counties with smaller populations, the comparison becomes increasingly difficult because so much of the data is suppressed.”

Meanwhile, Fauci and the vax-maniacs at the FDA just **rubberstamped another booster**. How much more data has to come out before these crooks are held accountable and this madness can finally stop?
