Pfizer Documents Analysis

Risks to Babies of Vaccinated Mothers as Reported in VAERS

June 9, 2022 • by Team 5: Maria Ziminsky and Linnea Wahl

***This report has been brought to you by
the War Room/DailyClout Pfizer Documents
Research Volunteers***

Summary

1. **Most important finding:** If you are pregnant, your baby is more likely to die at or before birth if you receive a COVID-19 vaccine than if you receive any other vaccine.
2. **Key detail leading to finding:** According to VAERS, 57% of all the vaccinations that resulted in a baby or fetus dying in the past 25 years or so occurred when pregnant women started receiving COVID-19 vaccines.
3. **Events of concern (few paragraphs):**
 1. According to VAERS, within the first 10 days after pregnant women who had spontaneous abortions or their babies died of other fetal disorders were vaccinated against COVID-19, 1,559 of their babies or fetuses died. The remaining 2,257 babies died from day 10 on. Of the pregnant women who had spontaneous abortions or their babies died of other fetal disorders, 20% lost their babies on

the same day the mothers were vaccinated, and 21% lost their babies in the following 9 days

2. For women vaccinated between December 2020 and March 2022, VAERS reports that of the 3,816 pregnant women whose babies died after COVID-19 vaccination, 2,819 women—nearly 74%—received the Pfizer/BioNTech vaccine (Table 1). About 21% received Moderna's vaccine and less than 5% received Janssen's vaccine. Babies' deaths were roughly equal after the mothers' first and second shots.
4. **Further investigation:** The 3,816 babies who died after their mothers were vaccinated between December 2020 and March 2022 are probably only a fraction of the actual number of adverse events such as spontaneous abortions and fetal deaths. VAERS has data integrity issues; for example, some time intervals have no data associated with them, the system doesn't collect information on how old a fetus was at death (how far along the woman's pregnancy was), and followup health records are not available
5. **Scale of situation:** According to VAERS, 57% of all the vaccinations that resulted in a baby or fetus dying in the past 25 years or so occurred when pregnant women started receiving COVID-19 vaccines. Within the first 10 days after pregnant women who had spontaneous abortions or their babies died of other fetal disorders were vaccinated against COVID-19, 41% of their babies or fetuses died. Nearly 74% of these women received the Pfizer/BioNTech vaccine.

Risks to Babies of Vaccinated Mothers as Reported in VAERS

If you are pregnant, your baby is more likely to die at or before birth if you receive a COVID-19 vaccine than if you receive measles, mumps, flu, tetanus, or any other vaccine. This and other alarming facts about risks to babies of vaccinated mothers comes from the U.S. government's own Vaccine Adverse Event Reporting System (VAERS (<https://vaers.hhs.gov/about.html>)).

According to VAERS, between 1998 (the earliest VAERS reporting date) and May 2022, the total number of pregnant women who were vaccinated for all diseases and then lost their babies was 6,695. These babies died in spontaneous abortions and fetal disorders such as cardiac arrest and cystic hygroma (a tumor that forms on a newborn's neck). But just in the past couple years, 3,816 babies died after their mothers received a COVID-19 vaccine manufactured by Moderna, Pfizer/BioNTech, or Janssen (Table 1). These women were vaccinated between December 2020 and March 2022.

That means 57% of all the vaccinations that resulted in a baby or fetus dying

in the past 25 years or so occurred when pregnant women started receiving COVID-19 vaccines.

Also according to VAERS, we know that very soon—within the first 10 days—after these mothers were vaccinated against COVID-19, 1,559 of their babies or fetuses died. The remaining 2,257 babies died from day 10 on. Of the pregnant women who had spontaneous abortions or their babies died of other fetal disorders, 20% lost their babies on the same day the mothers were vaccinated, and 21% lost their babies in the following 9 days (Table 2). Could it be a coincidence that a COVID-19-vaccinated woman loses her baby, and 41% of the time the baby dies within 10 days of the mother's vaccination?

In spite of this unusual "coincidence," many pregnant women go ahead with COVID-19 vaccination as

recommended (<https://www.cdc.gov/coronavirus/2019-ncov/vaccines/recommendations/pregnancy.html>)

by the Centers for Disease Control. Does VAERS suggest which vaccine is safest for an unborn baby? Indeed, for women vaccinated between December 2020 and March 2022, VAERS reports that of the 3,816 pregnant women whose babies died after COVID-19 vaccination, 2,819 women—nearly 74%—received the Pfizer/BioNTech vaccine (Table 1). About 21% received Moderna's vaccine and less than 5% received Janssen's vaccine. Babies' deaths were roughly equal after the mothers' first and second shots. These figures are rough; they would be more accurate if we knew how many pregnant women were vaccinated with each of the three vaccines. Still as we have reported (<https://dailyclout.io/the-facts-about-pfizer-mrna-vaccine-risks-to-unborn-babies/>)

before, the Pfizer/BioNTech vaccine appears to be putting unborn babies at increased risk of death.

These are alarming figures, and they are even more so when we understand what VAERS data represent. The U.S. government's

guide to VAERS (<https://vaers.hhs.gov/data/dataguide.html>) states that

"Underreporting' is one of the main limitations of passive surveillance systems, including VAERS. The term, underreporting refers to the fact that VAERS receives reports for only a small fraction of actual adverse events." So we must keep in mind the 3,816 babies who died after their mothers were vaccinated between December 2020 and March 2022 are probably only a fraction of the actual number of adverse events such as spontaneous abortions and fetal deaths.

There are other limitations to data gathered in VAERS. The total count of unborn babies who died after their mothers were vaccinated (6,695) varies depending on the data selection criteria, such as symptoms, vaccine manufacturer, and vaccine products (Fig.

1). In addition, VAERS has data integrity issues; for example, some time intervals have no data associated with them, the system doesn't collect information on how old a fetus was at death (how far along the woman's pregnancy was), and follow-up health records are not available (from the [VAERS website \(https://vaers.hhs.gov/data.html\)](https://vaers.hhs.gov/data.html): "amended [followup] data are not available to the public"), making it difficult to verify cause and effect. Usefulness of the VAERS data also suffers because VAERS does not tell us the total number of doses given to pregnant women for each vaccine.

Nonetheless, the VAERS data suggest, as do Pfizer sources (<https://dailyclout.io/the-facts-about-pfizer-mrna-vaccine-risks-to-unborn-babies/>)

, grave danger to pregnant women and their babies from COVID-19 vaccines. When will the U.S. Centers for Disease Control and the Food and Drug Administration acknowledge and act on these alarming safety signals?

Fig. 1. Sample VAERS Query

Table 1. VAERS Fetal Deaths After COVID-19 Vaccination

COVID-19 vaccine manufacturer	VAERS symptom resulting in fetal death	Number of cases	% of total cases
Moderna	Fetal exposure during pregnancy	32	
	Spontaneous abortion	693	
	Fetal death	73	
	Fetal disorder	18	
	Fetal cardiac disorder	4	
	Fetal distress syndrome	1	
	Subtotal	821	21.5%
	Pfizer/BioNTech	Fetal exposure during pregnancy	89
Spontaneous abortion		2418	
Fetal death		236	
Fetal cystic hygroma		9	
Fetal cardiac arrest		20	
Fetal disorder		16	
Fetal cardiac disorder		15	
Fetal distress syndrome		15	
Fetal damage		1	
Subtotal		2819	73.9%
Janssen		Fetal exposure during pregnancy	43
	Spontaneous abortion	115	
	Fetal death	11	
	Fetal cystic hygroma	1	
	Fetal cardiac arrest	2	

	Fetal disorder	1	
	Fetal cardiac disorder	2	
	Fetal distress syndrome	1	
	Subtotal	176	4.6%
Total cases		3816	

Table 2. VAERS Days After Mother's COVID-19 Vaccination of Reported Fetal Death

VAERS symptom resulting in fetal death	Day 0	Day 1—9	Day 10—14	Day 15—30	Day 31—60	Day 61—120	> 121 Days	Not known	Total cases
Fetal exposure during pregnancy	64	7	4	8	7	2	6	66	164
Spontaneous abortion	601	707	233	455	396	218	112	504	3226
Fetal death	71	70	25	44	30	20	14	46	320
Fetal cystic hygroma	2	1	1	1	1	2	0	2	10
Fetal cardiac arrest	10	4	0	1	1	0	0	6	22
Fetal disorder	3	5	4	1	5	8	5	4	35
Fetal cardiac disorder	3	4	1	2	1	2	3	5	21
Fetal distress syndrome	3	4	0	0	1	3	2	4	17

Fetal damage	0	0	0	0	1	0	0	0	1
Total cases	757	802	268	512	443	255	142	637	3816
% of total cases	20%	21%	7%	13%	12%	7%	4%	17%

My vaccinated daughter has recently become pregnant. (she was "vaxxed" about a year ago) I'm worried about the baby and also whether or not the child should be breast fed.

Is there any information about this?

Thanks.

My daughter was vaccinated prior to pregnancy with Pfizer. She became pregnant, post vaccine, and at 19 days old baby went into cardiac arrest and flatlined. He is currently fighting for his life with a mountain of unknowns. Doctors don't have a clue and there are no test to conclude any diagnosis. Everything cones back normal, but physically he is not ok.

My cousin, who is a nurse and vaxxed,, I'm sure she was boosted while pregnant too, just delivered her baby via c section. Shortly after birth the baby had a stroke and Mom is on her 3rd surgery from an infection. I can't help but think it has to do with the injection. I've never heard of a baby having a stroke.

Hi These hospitals that take care of kids need to be stopped as well. I'm trying to print them and bring to their attention. these people that are pushing this agenda are very evil. Why don't they vaccinate their own kids. Now all of a Sudden Fauci is vaccine yeah right. I would love to have someone i know go and administer all the boosters and shots to him with all of us in front of him. The lies don't seem to stop. Either through the media driven lies, the actors that they involve. Please lets get better people involved running our states and country and take it back. This current administration gas lights everyone.

My granddaughter lost her baby at 22 weeks with cystic hygroma, she was vaccinated a week before she became pregnant with Pfizer

Dear ACIP Members,

I am writing to say that I do not feel that these covid "vaccines" are in any way needed for children of any age. The risks of these experimental vaccines greatly out weigh the benefits. Considering the trails are no where near complete for these age groups I'm having a hard time seeing how you can move forward with an ongoing trial. Secondly with the Data coming in about the complications in adults, if anything all of these covid injections should be halted immediately. <https://www.nature.com/articles/s41591-021-01578-1.pdf> (<https://www.nature.com/articles/s41591-021-01578-1.pdf>)

There is already ample evidence that the incidence of myocarditis in children is greatly increased in the 7-12 year old age group. I can only imagine what kind of fall out and issues this will cause in a 6 month old infant? Especially since this vaccine technology has never really been tested before in humans for long term health impacts.

For the sake of all of humanity please stop this madness.. A lot of parents are very prone to listening to their doctors. we need to give them the facts to stop. These nuts are trying to take over our rights and slowly working as quickly as they can.

Hi there, I have received a freedom of information document from NHS Scotland regarding the spikes in baby deaths September 2021 and March 2022. I would very much like your team to cast a more experienced eye over this. Could you possibly send me a contact email where I can pass this onto your team. Thank you.
