

Here's what you need to know about Mike Lindell's Truth Summit - he's been right all along!

Tierney's Real News

Aug 24

I promised you a summary of Lindell's Truth Summit and it's hard to put it all in one post. But here goes.

The BIG news? PCAPS and Dennis Montgomery were both revealed as real during the final hours of the summit. Remember, "PCAPs" or packet captures - a technical format for capturing web traffic in real time - are the digital proof needed to show a court that an election was changed or tampered with through an internet connection to the machines or the databases.

The fake news told us a year ago that Lindell was lying about PCAPs. They said they were fake. They discredited his past summits on election fraud. Then, the machine companies sued Lindell and anyone who spoke of it. BUT, now it turns out Lindell was right - just like I said. Even Steve Bannon, who has conveniently stayed on the fence about PCAPs and said he wasn't a "machine guy" - viewed the data and said he finally believed Mike!

If you understand anything about how modern elections work - you'd know that the "ballot mules" need to know HOW MANY ballots to stuff by precinct to rig an election - and the only way they can do that in today's world is to have computers and machines tell them HOW many to stuff to WIN - and then the computers and machines need to cover up the paper trail and fix the databases with phantom voters! It all works together! Biden didn't get 12 million FAKE votes without a sophisticated algorithm and a well-coordinated election fraud system. Remember - he told us that himself!

BIDEN: "We have put together I think the most extensive and inclusive voter fraud organization in the history of American politics."

Dennis Montgomery was the one who got Lindell the PCAPs last year from the 2020 election - and they've been trying to discredit him ever since. The CIA's tool to rig

elections here and overseas for Color Revolutions - which Dennis Montgomery developed and that Sidney Powell talked about - called Hammer & Scorecard - is real. Dennis Montgomery is real. Using computers and machines to engineer voter fraud is real. It's ALL real. Lindell's Truth Summit proved it.

EA: "Dennis Montgomery previously worked with US intelligence agencies on election tampering programs. He's also reached out to Grassley in the past. THIS IS MAJOR!!!

Dennis Montgomery was contracted by the US Government to create software to monitor elections long ago. He created the software and licensed it to the US Government. The US Government stopped paying him on his recurring license but continued to use his software.

Dennis sued them and is owed a hefty sum. The US Government refuses to pay.

Lindell bought the software and the debt from Dennis Montgomery (he basically bought the company from Dennis.) Lindell is now suing the US Government to get the owed funds and entered the PCAPs from the 2020 election as proof that the software is still in use and the software works."

It also appears that PCAPs are readily available and online election theft can be monitored in real time - and it looks like that is what Lindell & TrueTheVote did during the primaries to stop fraud! So they have been monitoring CURRENT ELECTIONS in real time and the Democrats and RINOS know that!

CATES: "Is this how they made the corrupt RINO establishment in Arizona blink and then back off their intended theft of the primaries to stop Kari Lake, Mark Finchem and Abe Hamadeh?

Is this why True The Vote was active and operating in AZ in the weeks leading up to the Arizona primaries? Did they contact the GOP RINO establishment in Maricopa and other counties and rub their faces in it?

Were Maricopa and Pima and other county election officials contacted and told something along the lines of "We're legally recording all the PCAP election data in real time. You better stop the cheating NOW or we'll fully expose you?"

Could be!

Karma Patriot 

Forwarded From
Karma Patriot

For those who missed **Lindell's Truth Summit**, here's my loooooong summary. 😬

Lindell & team told us that, unbeknownst to those cheating, they discovered they **didn't even really need access to the machines to catch them flipping votes.**

They could legally request & access the **PCAPS**. So the Dems **kept cheating** throughout the recent **PRIMARIES** (bc they're incredibly stupid).....but this time, they had legal foreknowledge, so **watched it real time & got PCAPS as proof.**

Anyone can request **PCAPS** from *any* county in *any* state.

So it seems that's what their team has individuals across the country doing right now, collecting PCAPS.

My opinion is that the **Dems cheated** in corrupt counties during the **Primaries**, which is why it *temporarily* looked like the MAGA candidate might lose.

Seems to me that they **immediately** took the claim to whomever was involved (in lots of cases a RINO Republican that Dems wanted on the ticket), & gave them a choice of **conceding their loss, or having how they won exposed.**

And **THAT** is why we are now winning.

Now the Dems realize **we tracked it in the primaries, & we will do that & MORE in November.**

So **NO MORE CHEATING....or else.**

Meanwhile, **we must VOTE** like our lives depend on it & get back the house & Senate.

Then comes all **The Pit & TTV data & research** for hearings & possible SCOTUS case.

THEN we will get rid of these machines for good!

What most people don't know is that all of this election fraud has been going MUCH longer than they think. Here's a video of Clinton Curtis from a 2004 hearing to the Senate.

He testified under oath that he created an undetectable computer algorithm that would flip votes between candidates during elections in the U.S.

Sound familiar???

Proof of Election-Voter fraud in the USA from the h...

Here's Mike Lindell's own summary of the Truth Summit that he wants you to see.

<https://frankspeech.com/video/mike-lindells-interview-clint-curtis-moment-truth-summit>

Here's a quick summary of the rest of the Truth Summit from two sources:

UNCOVERDC MEDIA: All 50 states were represented at Saturday's "The Moment of Truth Summit" in Springfield, Missouri. Citizen-led investigations into the 2020 election and, in some cases, data from the 2022 primaries were presented. After seven plus hours of watching Mike Lindell's "State of the States" afternoon pow-wow on Saturday, four major takeaways emerged:

- 1) U.S. Voter rolls are egregiously poorly maintained.
- 2) Elected and appointed officials across the nation are either allegedly refusing to cooperate or actively blocking citizen-led election integrity initiatives, whether it's to investigate machines or clean up the voter rolls.
- 3) Funding and lawyers are difficult to secure.
- 4) Despite the odds, citizens across the country continue to be meaningfully engaged in fixing elections.

Impressively, all but two of America's 50 states sent in-person representatives to present summaries of their findings, appearing in alphabetical order. New Jersey and West Virginia sent their findings to Lindell's team, and their data were summarized by Lindell and moderator Brannon Howse during the summit. Lindell's platform Frank Speech provides clips from all 50 states on its website here. Red state or not, every state in the country allegedly has systemic problems with election administration.

Despite going about an hour over the allotted time for the 50 presentations, time was still limited for each presentation. Many states did not have ample time to present their data fully. Still, the summit organizers did an amazing job capturing each state's findings with a uniform series of slides, one set for each state. With those slides, titled "Explain This," "Roadblocks," and "Victories," most of the presenters were able to present a small slice of their findings and results.

A few states like Arizona, Michigan, Pennsylvania, Georgia, and Wisconsin got more air time, partly because they are swing states that played heavily in the 2020 election. Those particular states also have more robust teams dedicated to looking at almost every aspect of the 2020 election, with lawsuits in tow. Many presenters have established organizations with corresponding websites highlighting their data and proposed solutions.

Problems with Voting Machines

After watching each state present its data, it is easy to understand why voting machines are problematic. The Alabama team stated that voting machines in their state "are less secure than vending machines." The Delaware team allegedly found "their machines

have a 13-25% error rate and almost 10% of the votes have to be adjudicated.” In Iowa’s 2022 Primary, the team there reported:

“Scanners that check IDs and the voter database went down on election day, and during the outage, there were technicians going around from poll book to poll book sticking in thumb drives to update the voter rolls. With the redistricting which was finalized in November of last year, the secretary of state still hadn’t updated all the voter rolls to match the new districts until after the primaries. So, during the primary at 9:30 in the morning, during the voting, in one county they went to all of the precincts and replaced the thumb drives in the poll books. And as of July of this year, the voter rolls were still not updated. So some voters were still showing up in their old districts and we are not sure how the votes were counted.”

Patrick Colbeck from Michigan reported that the state’s machines allegedly have embedded 4G wireless chips that connect to the internet on startup. Colbeck and Matt DePerno did an extensive investigation of issues in the Antrim County 2020 election, going head to head with the Secretary of State in several lawsuits.

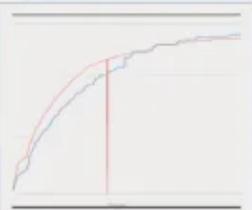

Colbeck also alluded to the “Edison Drop,” as did many states. The Edison Drop (Edison Research) signifies the moment when the cumulative vote tally inexplicably dropped to zero in the wee hours of the morning and then suddenly shot back up, resetting itself. The polling firm Edison Research explained the drops were “human error,” stating the votes were “mistakenly entered, and then removed” to correct the results.

MICHIGAN - STATE OF THE STATES

4:24 PM ET

State after state reported that machines were operating with outdated software, which means their elections cannot be properly certified. Mississippi reported that each county has different ways of testing machines, “if they test them at all.” In Mississippi, there are no statewide standards whatsoever, and the voting machine companies are the ones who perform the testing and election software updates. There are “12 different types of machines throughout the state and no law requiring counties to test machines.” Mary Smith from Tennessee Voters for Election Integrity in the red state of Tennessee reported that voting machine vendors:

“Control the entire process—from the ballots to the BMDs, to printing ballots to scanning ballots, tabulating ballots, and tallying the entire county totals. It is a monopoly without ANY citizen control. Despite real evidence that machines can be hacked, vendors refuse to answer any questions or allow internal inspections. Tennessee’s Secretary of State (Tre Hargett), Coordinator of Elections (Mark Goins), the State Election Commission, and even many county election commissions protect the vendors instead of the citizens. There are roughly 30 different voting machines in use in Tennessee.”

Smith looked at eight counties in the state and said she “could not get any of those voter rolls and voter histories to match up to what was certified by the secretary of state. None of them. Not even down to the precinct level.”

Technology

- vendors control the entire process – from the ballots to BMDs to printing ballots to scanning ballots, tabulating ballots and tallying entire county totals. A monopoly without ANY citizen control.
- Despite real evidence that machines can be hacked, vendors refuse to answer any questions or allow internal inspections.
- vendors are anything but transparent.
- Tennessee Secretary of State, Coordinator of Elections, State Election Commission and county election commissions protect the vendors, instead of citizens.
- The EAC has shown its lack of desire to protect citizens against questionable machines that have been proven again and again and again as vulnerable and untrustworthy.
- There are only 3 SEC authorized voting machine vendors in TN: Dominion, Hart InterCak, ES&S, MicroVote & Lemay
- Among these vendors there are multiple systems, ie. Hart has 4 systems in use in TN, 11 others, 21 others, 31 vendors in 41 mostly rural
- Within each system, there are multiple models.
- There are roughly 30 different voting machines in use in TN.

Data Access

- The Secretary of State refuses to answer questions on voting machine contributions performed in the state, how they certified the Oct. 3, 2021 election which had so many unexplained issues.
- Legal blockades to gaining critical information about our election machines, people, processes to help change for the better.
- Inability to gain voter rolls from the state of the election. Sites reported have had ongoing changes within them.
- To date there are no counties where voter roll data has been received that matches up to the certified vote count from the November 2020 election.
- Funding required to obtain voter data across counties and state to reconcile vote totals and ensure clean voter rolls

Election Process

- Super Majority of Republican Legislature continues to fail legislation to close primaries to encourage voters despite support from State Executive Committee.
- Inability to convince legislators of voter abilities
- Strong Election Integrity Bills failed to make it out of Committee**
 - HB 2121/SB 2297: Clean up voter rolls. Give them another standing for redraft.
 - HB 1885/SB 1885: By 2024, full conduct random forensic audits of selected counties and voting machine vendors post-November statewide elections.
 - HB 2305/SB 2366: Comprehensive/TB/DNA identify election crime specialists, training, & educational materials for local law enforcement.
 - HB 2303/SB 2643: No foreign financing, interference in elections.
 - HB 2011/SB 2077: Process to complain re: commission malfeasance/neglect.
 - HB 2076/SB 2309: Hand-marked ballots with security markings.

Legislation

- We desperately need legal representation to state bureaucrats into making we have the power to achieve what we need to achieve and tear down any blockade they put up. Not able to move fast enough to address needed changes.
- We are in desperate need of an attorney to work with us to force the election commission at local and state level to produce public records we have requested through FOIA requests (CVs for 2020 and 2022 elections, voter rolls, etc.)
- Financial support needed for ongoing lawsuits and legal fees to hold both our elected and selected officials accountable.
- Any attempt to have law enforcement intervene is typically met with hesitation due to many factors including personal relationships with those who benefit from a fraudulent system and district attorneys who themselves are elected using these systems.

Public Awareness

- Need to get citizens to understand that the technology in our voting system is breaking our freedom. This includes the people employed to run our elections. Having a basic understanding of technology and cyber security should be requirement for poll workers.
- We need more concerned people in our state to become aware of what the problems are with election integrity. In TN everyone is very complacent because they think we have a conservative Republican state. They have no idea that we are in such grave danger of being the next Georgia. We need more people to help us.
- We need some way to educate the public. The media is all part of the Deep State bene and friends with RNCs.

Vendor History

- We have no single group moving election integrity forward across the state. We are destroying our freedom. This includes the people employed to run our elections. Having a basic understanding of technology and cyber security should be requirement for poll workers.
- The Voters for Election Integrity is primarily working in Williamson County where we live, not the whole state. We become overwhelmed just trying to move election integrity here in our own county. We need to be unified under one group ideally.
- Getting good people/patriots whom we can trust on our team to manage parts of our total effort at changing our election system.
- The time and ability to link arms with others in Tennessee who are concerned with election integrity and join forces.

TNRoadblocks/Mary Smith/Williamson County

New Jersey reported that voting machine companies and ballot printing firms regularly make contributions to county clerks “who participate in purchasing decisions for the equipment.” According to the reps for New Jersey, virtually no one in the state “is allowed to audit or examine the many parts of the election process, and machine vendors claim exclusive proprietary secrecy, blocking verification or examination of the election systems in the state.”

This was a common complaint in the various presentations. CISA has now admitted voting machine vulnerabilities after years of contending that American elections are safe and secure.

Voter Rolls are Abysmal

Machines aside, all state teams concluded that many of the problems with election administration could mostly be solved with cleaner voter rolls and a return to good old-fashioned paper ballots. State after state warned that dirty voter rolls are corrupting elections. Some highlights below:

Iowa reported counties with 130% turnout.

Minnesota was missing over 734,000 absentee voter records on November 29, 2020, “five days after the canvassing board met and certified the election and 64,067 voters were removed within a year with no explanation for the removal.

Maryland deleted all the video footage from drop boxes, violating state and federal laws. The state has “filthy voter rolls.” 21 counties and Baltimore City received money from CTCL and Zuckerberg. In the 2021 Annapolis City General Election, mail-in ballots were mailed to all registered voters. It took election officials 27 days to certify the 2022 gubernatorial election. They don’t count mail-in ballots until three days after elections. The group from Maryland has filed a RICO case in the state because of the CTCL/Zuckerberg funding.

Ohio’s voter rolls are “growing faster than the state’s population.

In Oklahoma, the “reddest state in the nation,” one county alone showed 636 registered voters with no physical address, and 65,000 voter ID cards were returned “undeliverable” in Oklahoma County in June of 2022.

Hawaii’s Corinne Solomon reported its population growth to be “very slow” over the past decade, yet, its voter rolls are extremely inflated. The reps reported 100,000 to 167,000 excess votes in the 2020 election. Solomon reported “*strange spikes in Democrat votes. If we don’t get rid of our horribly corrupt voter rolls, we won’t be able to have clean elections in Hawaii.*”

Colorado reported that unaffiliated voters are a huge issue, with “unaffiliated” being the “largest party in the state.” Unaffiliated voters receive two ballots in the mail.

Connecticut's team from Fightvoterfraud.org reported upwards of 230,000 fake voters on the state's rolls, among many other issues with the election process in the state.

Georgia's own Garland Favorito with Voterga.org stated that what SoS Raffensberger certified in the election did not match. The Trump margin was 103,705. Votes counted were 4,664,919, and votes cast were 4,758,217. Raffensperger certified 4,998,482 votes. However, there were allegedly 178,036 phantom votes. 5.8% extra votes were counted.

Kansas' Thad Snyder reported that paper ballots were confirmed to have been copied the day of the election instead of using official paper ballots during the August 2 primary. He also reported a Cherokee County “vote flip” after a “third party inserted a thumb drive into the tabulator to retrieve the results. Snyder explained, *“The only reason the flip was caught was because citizens in the state paid for a hand count of the actual paper ballots that revealed both the flip and confirmed the existence of the copied ballots. He and others fought with state officials to abide by Kansas Statute 25-3009 to count official ballots.”* Election officials and the Secretary of State tried to bamboozle them into believing that photocopies of the digital images of the ballots were lawful records for a post-election audit.

Maine's husband and wife team explained that all of the thumb drives from the 2020 election were “recalled and wiped out,” so there is no record of the election. The Maine state legislature put a law on the books stating there “can be no election audit unless 80% of the legislature votes for it after people in the state submitted over 15,000 affidavits to the legislature concerning the 2020 election.” 102.3% of the population in the state are registered to vote when they compared the 2020 census to the total ballot count certified by the Secretary of State. Two towns had over 100% registered. One reported 146%.

“Between the years of 2009 to 2019, there were 78k new voters registered. However, in a four-month period starting in November 2020, 71,846 registered to vote.”

They said that Zuckerberg “spent a lot of money in Maine.” The team told the story of one person who said she went to many nursing homes and group homes to register voters

during the pandemic lockdowns. WethepeopleMaine.org is the organization in Maine that collected the affidavits.

[NY Citizens Audit](#) explained their [extensive review](#) of what they now conclude is the state's “*weaponized voter rolls, official counts in the state do not agree.*” They reported discrepancies between the secretary of state and the board of elections showing a 334,615 vote discrepancy. The biggest vote count discrepancies are in the five Boroughs of New York City at 82.8%.

Slides/NYS BoE/ Registrations

[Wisconsin's report](#) was delivered by Justice Michael Gableman, a fierce investigator of election fraud in the state. His organization, WIElectionreview.org shows all of his findings. Gableman said that what he found in Wisconsin demonstrates “*the worst kind of fraud and corruption that can take place in a democracy. It involved using government power and government offices to rig the election in favor of one candidate, that would be Joe Biden, against Donald Trump.*”

Gableman alluded to his 136-page [Second Interim Investigative Report](#) delivered in March 2022 to the Wisconsin State Assembly. He described a web of Obama-connected individuals who used ZuckerBucks in the state in a coordinated election influence operation to “get out the vote” in [5 key cities](#) in Wisconsin.

Election clerks in the state allegedly colluded with Obama operatives [David Plouffe](#) and David Axelrod to swing the vote in Biden's favor. Gableman said the five largest cities used CTCL/Zuckerberg “COVID” funds under the guise of the pandemic but, in reality, “*less than one percent of the funds actually went to COVID safety materials.*”

ZUCKERBUCKS PATH TO CTCL

- Mark Zuckerberg and Priscilla Chan Donate \$400 Million
- Chan Zuckerberg Initiative (CZI)
- David Plouffe, CZI's Director Policy and Advocacy
- CTCL Flora Johnson \$330 Million
- CEIR David Becker \$69.2 Million
- \$8.8M Zuckerberg 5 Grants
- Election Official Legal Defense Network

FRANKSPEECH.COM

Roku AndroidTV

Gableman/State of the States

Gableman also explained the relationship between David Becker's ERIC organization (voter registration) and Wisconsin Election Commission Administrator Meagan Wolfe, the Chair of ERIC's Board. Becker also founded CEIR in 2016. CEIR and CTCL donated millions to Wisconsin in 2020 for election administration.

Roadblocks Everywhere

Almost every state's representatives reported resistance from both elected and appointed officials when trying to obtain documents or pass sane election legislation. Citizens told stories of being charged exorbitant, and discouraging fees for FOIA'd documents. They were consistently discouraged or barred from being allowed to inspect voting machines. They were often outright denied any efforts to question the 2020 election and, recently, some of the 2022 primaries.

Even "free" states like South Dakota, whose data is pictured in the graphic below, experienced roadblocks, many representative of those thrown in the path of other citizens' investigations across the country. Jessica from South Dakota reported:

"Secretary of State wouldn't answer questions. They were denied FOIA requests for election information. County auditors destroyed drop box videos, and denied FOIA requests for machine

logs, CVRs, and ES&S contracts. State attorneys coordinated statewide efforts to block FOIA requests in every county. Even the most conservative legislators didn't want to bring election integrity bills to the floor. Legislators blocked a bill to remove dead voters."

Roadblocks

Secretary of State	County Auditors	State's Attorneys	Legislators	County Commissioners	Territorial State Election Laws	Mail Forwarding Services	Vote Rolls
<ul style="list-style-type: none"> • Won't answer questions • Denied FOIA requests for election information • Buried security scan of SOS website • Will not advise county auditors anymore; refers them to State's Attorney • In 2020, purchased ES&S machines for all counties that were hand counting ballots. 	<ul style="list-style-type: none"> • Destruction of drop box videos • Deny FOIA requests for Machine logs, CVR's and ES&S Contracts • Ask ES&S how to respond to the FOIA requests • Charging \$1/page and up to \$30/hour to copy documents requested by citizens. 	<ul style="list-style-type: none"> • Coordinated statewide effort to block FOIA requests with the same response letter in every county • State's Attorneys advised to deny our requests per the State Bar Association • State Bar Association President is the lawyer retained to defend the counties lawsuit for public information 	<ul style="list-style-type: none"> • Even the most conservative legislators don't want to bring election integrity bills. • Senate is controlled by Democrats with an "R" behind their name. • Blocked bill to remove dead voters. 	<ul style="list-style-type: none"> • Will not add election issues to agenda • Will not meet with SD Carveaway • Deny their responsibility for election issues • Refuse to take action against machines or drop boxes. 	<ul style="list-style-type: none"> • Very vague and open to interpretation. • Residency is sold on the internet with voting rights. • Affidavit allowed if no state ID. • NO Post Election review or audit. • SD receives an "F" from Heritage Foundation 	<ul style="list-style-type: none"> • Mail forwarding services are a big industry in the state, which makes carveaway very difficult. We have lots of phantom voters from these businesses, which have grown 6X in the last three years. 	<ul style="list-style-type: none"> • Voter rolls hosted online by SOS website. • Website is not secure • Very outdated voter rolls. Must be thrown out and start over. • Flacked voter rolls → party affiliation changed without voter intent and inflated first day of absentee voting 2020.

The MOMENT OF TRUTH Summit
August 20th & 21st
HOSTED BY MIKE LINDELL

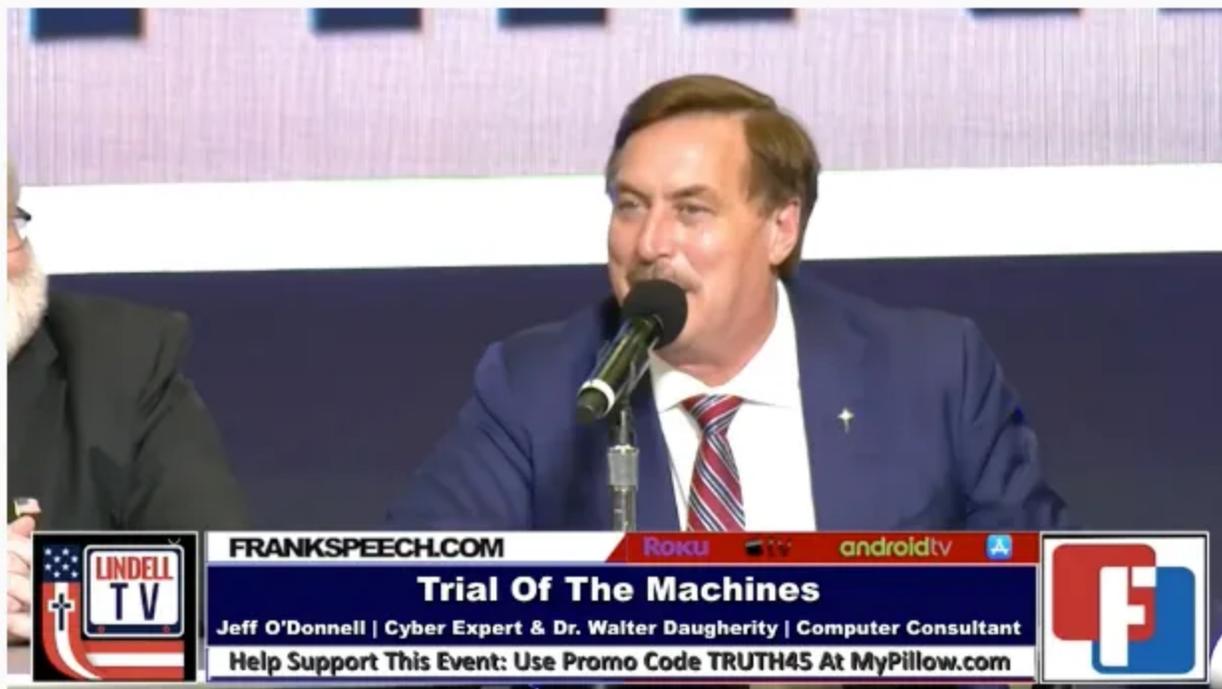

EMERALD ROBINSON: This one-hour section from the Summit of Truth is well worth your time — if you care about our elections. It's called "The Trial of the Machines." It explains what are called "Cast Vote Records" and why these records are the clearest indicators of machine-based election fraud.

Mike Lindell interviewed cyber experts Jeff O'Donnell and Walter Daugherty to discuss these records.

<https://frankspeech.com/video/cast-vote-records-prove-cyber-election-crime>

The Cast Vote Records Prove Cyber Election Crime.

By [The Moment of Truth Summit](#), 22 August, 2022

You learn that a Pima County (AZ) whistleblower attended a meeting of Democrats in September 2021 where *each of them was promised an extra 35,000 votes*. The whistleblower sent an email explaining this cheating to the FBI.

You learn that Utah — which does all mail-in voting — *refuses to turn over any of its Cast Vote Records*.

You learn that Texas refused to turn over any of its Cast Vote Records — until AG Ken Paxton forced them to do so.

You learn that Edison Research — the company that reports the vote counts for American elections to the media — reported impossible and absurd numbers in the 2020 election!

How To Get Your County's Cast Vote Records

The Cast Vote Records are the clearest indicators of whether or not there is machine-based election fraud.

On September 3, 2022, federal protections for these records under Title 52 Section 20701 comes to an end allowing the legal destruction of these records.

Don't let these records disappear from the public conscience. Here's how you can request your county's records. You can do this!

WHAT IS A "CAST VOTE RECORD"?

Cast Vote Records (CVRs) have proven to be one of the most useful, readily available forms of election records. Analysis of CVRs along with comparing CVRs from different states and counties has helped to identify election fraud all over the country.

We ask that everyone submit a public records request to their home county requesting the CVRs for the 2020 election, and any subsequent election. Before you do, visit <https://ordros.com> and check the CVR repository for your state and county. If the CVR is already there, there is no need to request another unless you wish to request one for any election after 2020. If you do request a CVR, this document will help you through the process.

A CVR is a file, either text or possible excel format, which lists on each line information about one ballot in the order processed. It will contain all of the votes made on that ballot in some fashion. This allows a data analyst to "replay" the election ballot by ballot to spot unnatural patterns of voting. It will also contain all or some of the following fields. (Fields marked with an asterisk are strongly desired)

- *CVR Number
- *Tabulator ID
- * Counting Group (or other name – this tells how the vote was cast)
- Batch ID
- *Precinct ID
- Ballot Type

What does NOT appear in a Cast Vote Record is any information which would identify the voter. Some counties may insist on redacting the ballots for tiny precincts in the (somewhat ridiculous) belief that you scoped out the order people went into the polling place and can then calculate who belongs to which ballot. Small redactions (normally precincts with less than 5 voters) are not a problem, as their omission will not affect the overall analysis. If your county redacts, insist that they send you the number of redactions by precinct.

Examples of the common CVR formats are listed at the end of this document.

For more detail on how to get “cast vote records” - see the end of Emerald’s document here:
