

# If you are a healthcare worker, now you can tell your story without fear of retribution

The only way this will end is if doctors are allowed to speak out about what is happening without fear of retribution. Now you can.

Steve Kirsch

Aug 24

**COVID-19 vaccines can kill you**

COVID-19 vaccines increase risk for infection, serious illness, and death

We made a mistake. We shouldn't have recommended that people get the shots. Sorry about that.

All vaccines are unsafe. Andrew Wakefield was right.

CDC

Data from December 2020 to July 2021  
bit.ly/MMWR7043e2

MMWR

If the CDC was honest, this is what their ads would look like. But they aren't honest, so we need to hear the truth from doctors. Now there is a way to do that and not be punished.

If you work in healthcare and have a story to tell about the COVID vaccines, you can now tell it without fear of retribution.

Once you hit Submit, your story will be public, but your identity will not be revealed.

**Here's [the link](#) to submit your story. You can include file attachments of any type.**

You can [read the submitted stories here](#).

## Comparative stories work best!

Many people reported anecdotes like person X experienced symptom Y post vax.

To be the most compelling, please re-cast your report in comparative terms where you are either:

1. Comparing injury RATES pre-vax vs. post-vax period OR
2. Comparing injury RATES of vaxxed vs. unvaxxed (this is the most compelling)

Also, be sure to include N (the number of patients in each group).

Here are some example stories that are comparative:

1. I am responsible for 500 elderly. Before the vax, we'd see 4 deaths a month. In February 2021, immediately after the vaccines rolled out, the death rate jumped to 20 per month and has never returned to normal.
2. I'm a neurologist with a practice of 20,000 patients. In the last 11 years, I've never needed to report any injuries to VAERS. Since the COVID vaccines rolled out, I now need to report over 1,000 injuries.
3. In our hospital, we'd see maybe 1 stroke code a month. After the vaccines rolled out, that number has jumped to at least 10 per month.
4. Out of 20 doctors who took the vax, three have developed cancer in one year. Out of the 10 doctors who had a vaccine exemption, there were no new health impacts.
5. Summer was considered a break because typically the number of patients would drop. Not this year. I have seen a 10 fold increase in the number of strokes, heart attacks, blood clots, epiglottis, etc. And the patients are in their 40s and 50s not late 60s to 80s.
6. I've been a nurse for 23 years at a major trauma hospital and never heard of a kid under 20 dying from cardiac arrest. Since the COVID vaccines rolled out, I know of 30.

Once again, here are the links:

1. Link for [healthcare professionals to report](#) a new or updated entry.
2. Link to [view your existing entry](#).

## Submit as often as you like

Your story can be short, or it can be as long as you like (see for example [this impressive story](#) from a podiatrist).

For verification purposes, we require at least one way to contact you. This can be your protonmail account (which keeps your info very confidential), or the contact info of a friend who knows how to reach you. None of your contact info will be publicly disclosed.

I'd like to collect hundreds of stories from healthcare workers.

Please submit your stories and ask your friends to submit their stories.

It is critical for every healthcare worker to speak out about what is really happening. Remaining silent will result in more deaths and disability.

Please help. Thanks!
