This year has seen a sudden increase in the number of fatalities that have been attributed to vaccines.

These authoritarians have been telling us for the past two years that these vaccines are safe and effective, but we have consistently refuted their claims.

Instead of being open, honest, and transparent about the vaccines, the federal government has worked tirelessly to cover up anything that would be considered negative towards the Covid jab.

What are they hiding?

Reports from the **Vaccine Adverse Events Reporting System (VAERS)** including non-domestic reports showed there are now over 1.3 million cases of COVID-19 vaccine adverse reactions including more than 30,000 deaths through August 12, 2022.

The VAERS website is now reporting a total of **1,385,398** COVID vaccine adverse events according to the latest number.

There are now:

- ** 30,347 reported deaths from the COVID vaccine
- ** 173,449 reported hospitalizations
- ** 4,941 miscarriages
- ** 16,278 heart attacks
- ** 51,566 developed myocarditis/pericarditis
- ** 56,743 permanently disabled
- ** 33,583 life threatening condition
- ** 14,518 shingles

United Kingdom

In the United Kingdom, the total number of complaints of suspected adverse drug reactions (ADRs) received in the country up to and including July 27th, 2022 was **431,993**.

These reports were recorded in The Yellow Card. **The Yellow Card** scheme is a mechanism by which anybody can voluntarily report any suspected adverse reactions or side effects to the vaccine.

“We are working with public health bodies and encouraging all healthcare professionals and patients alike to report any suspected ADRs to the Yellow Card scheme. As expected, reports gradually increase in line with an increase in doses administered,” according to the website.

“The overall reporting rate for first, second and third or booster doses is in the order of 2 to 5 Yellow Cards per 1,000 doses administered for the COVID-19 Vaccine Pfizer/BioNTech, COVID-19 Vaccine AstraZeneca and COVID-19 Vaccine Moderna. It is known from the clinical trials that the more common side effects for all vaccines can occur at a rate of more

than one in 10 doses (for example, local reactions or symptoms resembling transient flu-like symptoms).”

“Yellow Card reports of suspected ADRs are evaluated, together with additional sources of evidence, by a team of safety experts to identify any new safety issues or side effects,” the website wrote.

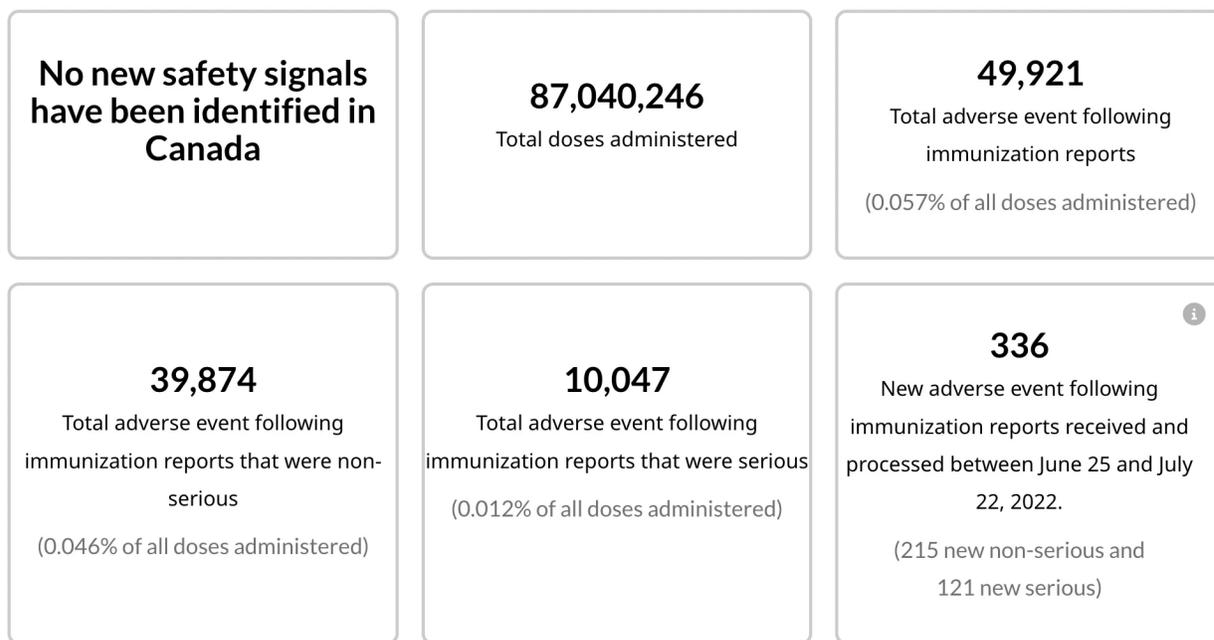

Canada

The Canadian government has received roughly 50,000 reports of adverse reactions to COVID vaccinations, 10,047 of which were deemed to be severe.

“A total of **87,040,246** vaccine doses have been administered in Canada as of July 22, 2022. Adverse events (side effects) have been reported by **49,921** people. That’s about 6 people out of every 10,000 people vaccinated who have reported 1 or more adverse events,” according to the government’s [website](#).

“Of the **49,921** individual reports, **39,874** were considered non-serious (**0.046% of all doses administered**) and **10,047** were considered serious (**0.012% of all doses administered**),” it said.

What you need to know up to and including July 22, 2022

Source: Government of Canada

“Myocarditis (inflammation of the heart muscle) and pericarditis (inflammation of the lining around the heart) following vaccination with COVID-19 mRNA vaccines. Data in Canada indicate a higher number of reports in younger people (i.e. less than 40 years of age) than would normally be expected in this age group in the general population,” it added. You can read the rest [here](#).

Australia

In Australia, the total adverse event reported in **Therapeutic Goods Administration** (TGA) following immunization to 7 August 2022 was **135,249** out of **62,626,416 doses administered**.

Source: Therapeutic Goods Administration

From the **TGA** website:

To 7 August 2022, we have received about 4,240 reports from approximately 3.7 million doses of Comirnaty (Pfizer) and Spikevax (Moderna) in 12-17 year olds. The most commonly reported reactions are chest pain, headache, dizziness, nausea and fever.

The TGA is also closely monitoring adverse event reports in 5-11 year olds. To 7 August 2022, we have received about 1,600 reports from approximately 2.3 million Comirnaty (Pfizer) and Spikevax (Moderna) doses administered in this age group. The most common reactions reported included chest pain, vomiting, fever, headache and abdominal pain. We have received 37 reports of suspected myocarditis and/or pericarditis in this age group. Following review of the reports, 4 were likely to represent myocarditis and another 7 reports were likely to represent pericarditis.

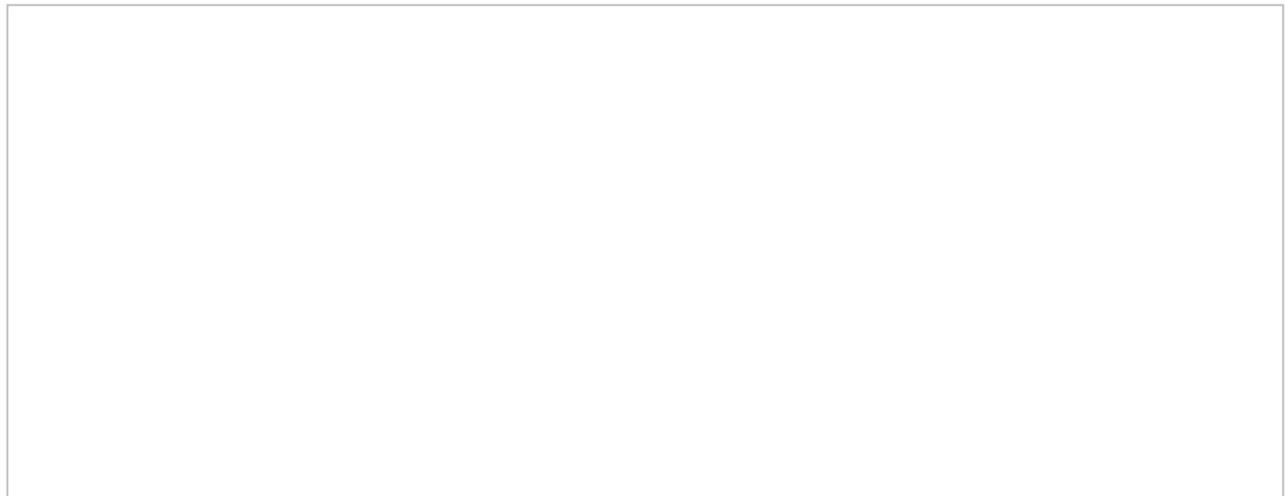

Survey data from [AusVaxSafety](#) show that:

- children and adults are more likely to experience side effects after a second COVID-19 vaccine dose, but most reactions are mild and temporary.
- children aged 5-11 years report fewer side effects than older Australians following a second dose. You can read the rest [here](#).

Philippines

In the Philippines, the data shown below from [Food and Drug Administration \(FDA\)](#) are cumulative reports from the start of the vaccination program on 01 March 2021 up until 05 June 2022.

There were a total of **101,984 reports of adverse effects**. Out of those reactions, **93,572 were considered to be non-serious** events, while **8,412 were serious events**. You can read the rest [here](#).

New Zealand

Of the **62,937 adverse events** following immunization (AEFI) cases reported in New Zealand by Pfizer up to and including 30 June 2022, **59,485 were non-serious, and 3,452 were serious cases**.

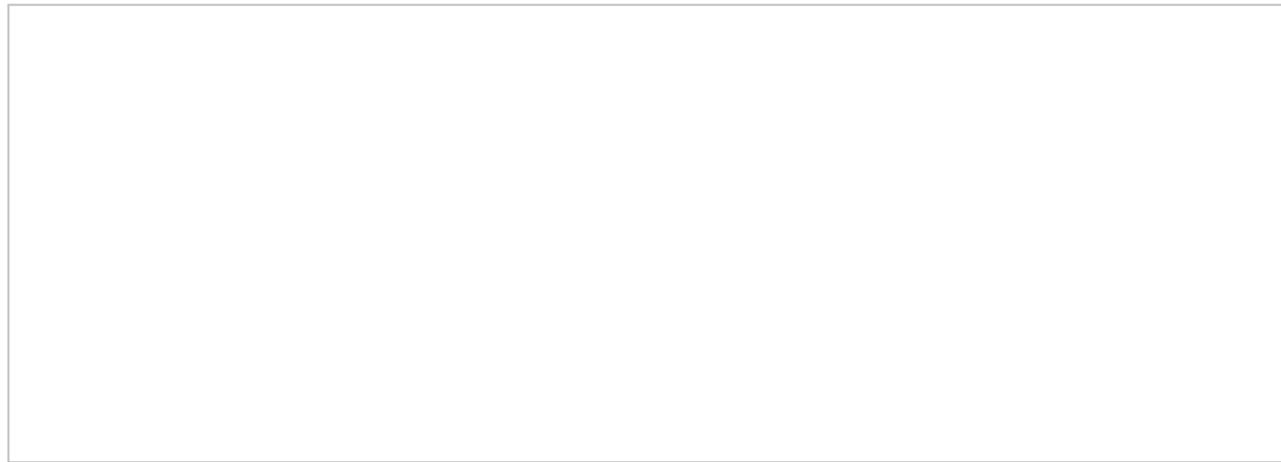

Of the **313 adverse events** following immunization (AEFI) cases reported in New Zealand by Pfizer, **292 were non-serious, and 21 were serious cases**. You can read the rest [here](#).

Medsafe: New Zealand Medicines and Medical Devices Safety Authority

Singapore

The number of recorded adverse events (AE) in Singapore was **17,313, with 1,032 of those being potentially serious**. Read the rest [here](#).

South Korea

In South Korea, a total of 71,413 adverse events were reported following immunization with Novavax from February 12, 2022 to March 12, 2022. This data does not include other vaccines approved in South Korea. You can read the rest [here](#).

Table 1. Status of adverse events following immunization (AEFIs) with Novavax

Unit : case (cases/per 100,000 vaccinations)

Variable	Number of vaccinations	Number of AEFIs reports	AEFIs reporting rate	Non-serious AEFIs*	Serious AEFI ^b			
					Subtotal	Number of deaths	Number of suspected anaphylaxes	Number of major AEFIs
Total	71,413	183	(256.3)	175	8	2	4	2
By vaccination								
First	49,180	138	(280.6)	130	8	2	4	2
Second	3,543	20	(564.5)	20	0	0	0	0
Third	18,690	25	(133.8)	25	0	0	0	0
Sex								
Male	32,161	72	(223.9)	70	2	0	1	1
Female	39,252	111	(282.8)	105	6	2	3	1
By age								
18–49 years	47,744	140	(293.2)	137	3	0	3	0
50–59 years	11,192	23	(205.5)	21	2	0	1	1
60–74 years	9,206	17	(184.7)	16	1	0	0	1
More than 75 years	3,271	3	(91.7)	1	2	2	0	0

European Union

Below are the reports of suspected side effects in the EU/EEA: (Status as of June 26, 2022)

- BioNTech and Pfizer: 848,204
- AstraZeneca: 297,917
- Moderna: 230,524
- Janssen: 54,475
- Novavax: 1,094

According to these websites, the data does not necessarily mean that it was caused by the vaccine, only that the reporter has a suspicion it may have been.

There will be additional countries added to this list. When new data becomes available, we will update this.
