Prior to young girls being offered the Covid-19 vaccine, deaths among the age group were in line with the expected five-year average. But an analysis of official data published by the Office for National Statistics shows that deaths among female children increased by 57% immediately after they were first offered the Covid-19 vaccine.

The risk of children dying due to the alleged Covid-19 disease is so extraordinarily low that it is negligible, and this is precisely why the Joint Committee on Vaccination and Immunisation refused to recommend that children be offered a Covid-19 injection in the UK, citing that the benefits do not necessarily outweigh the risks.

One of those known risks is a condition known as myocarditis, which causes inflammation of the heart muscle and reduces the heart's ability to pump blood, and can cause rapid or abnormal heart rhythms.

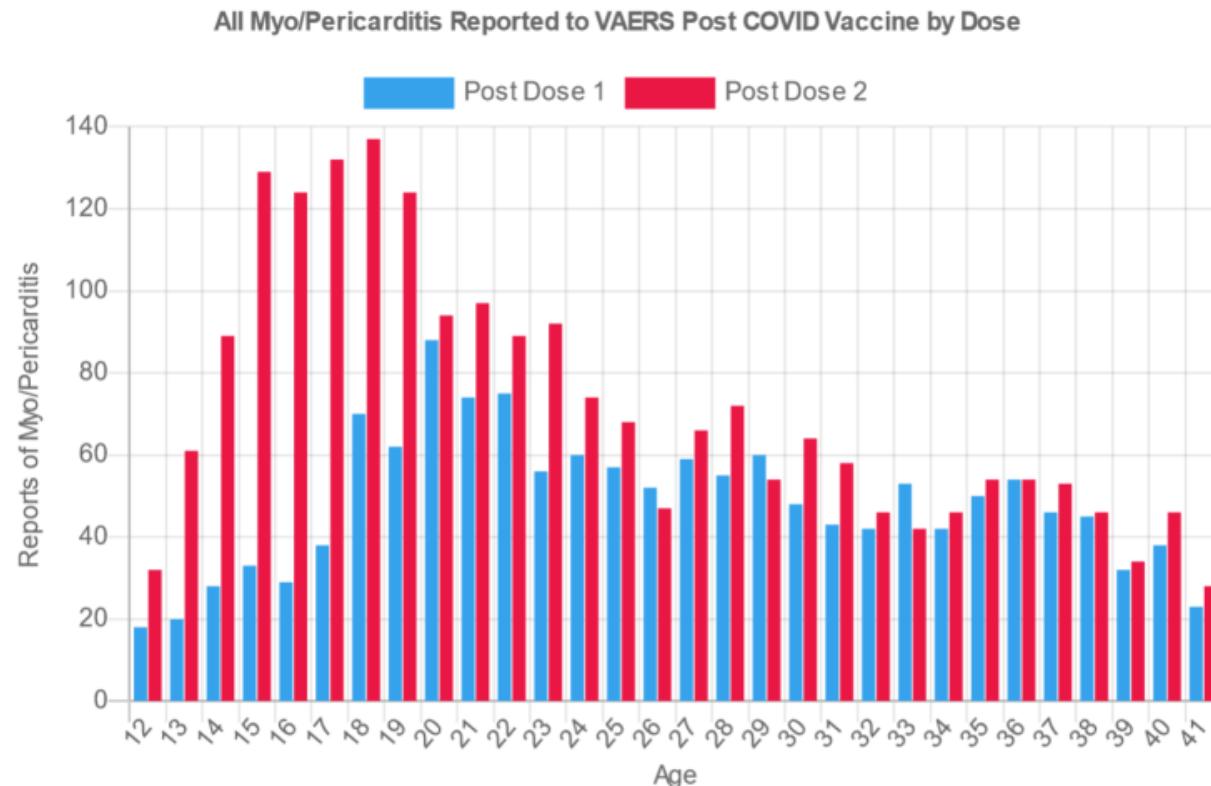

30

Medicine regulators are fully aware (<https://www.gov.uk/drug-safety-update/covid-19-vaccines-updates-for-july-2021#further-information-on-reports-of-myocarditis-and-pericarditis>) that myocarditis can result from an adverse reaction to the Covid-19 injections, especially to the Pfizer mRNA injection. They are also well aware that it disproportionately affects younger adults and teenagers.

30

Source

So if the UK Medicine Regulator is aware of the risk of myocarditis following Covid-19 vaccination, we're quite positive the Chief Medical Officer for England, Professor Chris Whitty, who overruled the JCVI and advised the Government to offer the Pfizer Covid-19 injection to children, was also aware of the risk of myocarditis following Covid-19 vaccination.

following week.

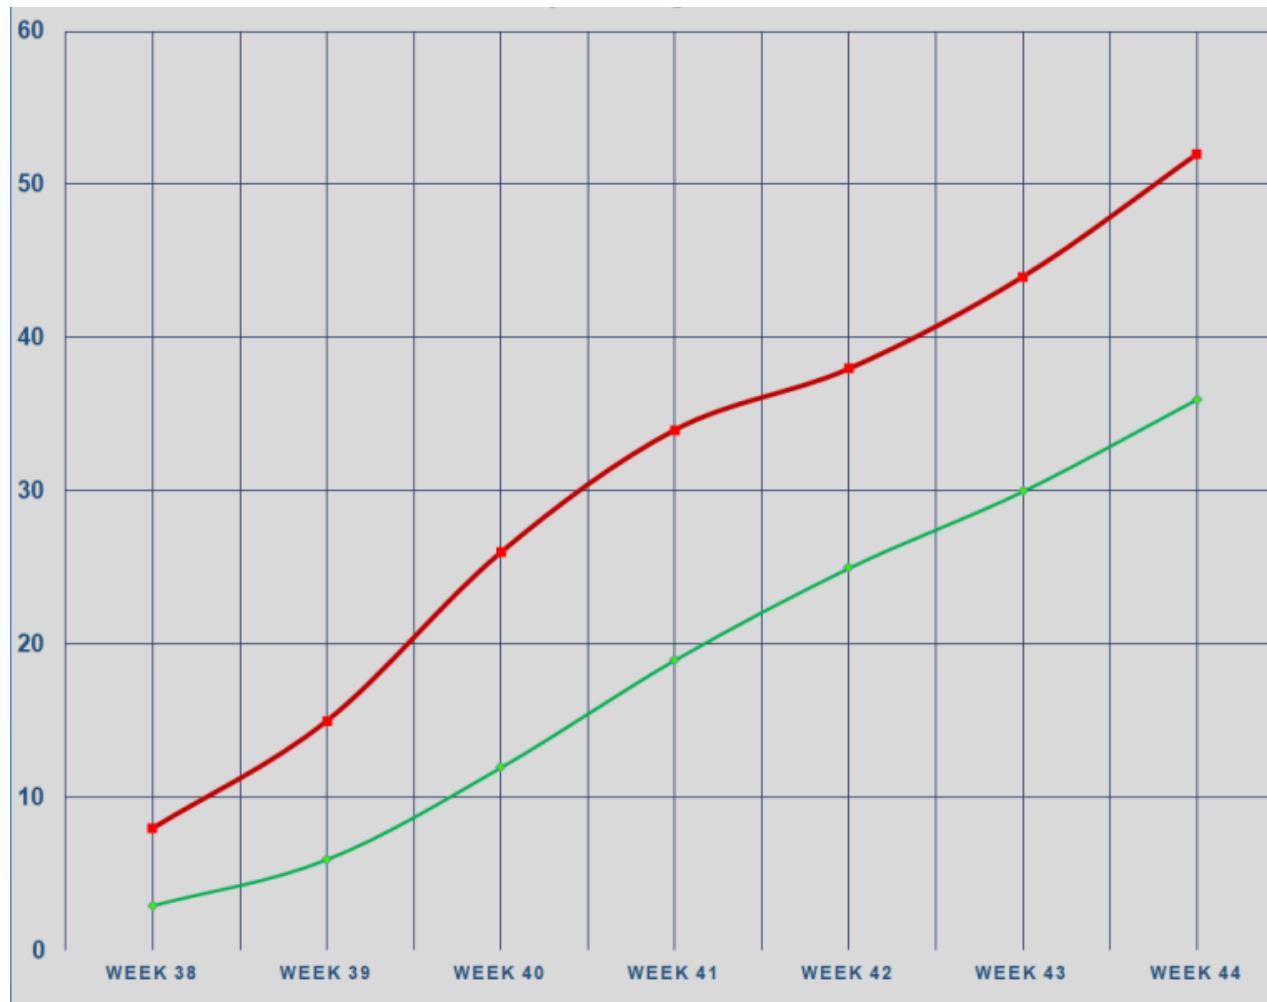

September 13th fell in week 37 of 2021, so we took a look at the official death statistics of children aged 10-14 from week 38 onwards. The ONS data for 2021, can be found [here](#)

(<https://www.ons.gov.uk/peoplepopulationandcommunity/birthsdeathsandmarriages/deaths/datasets/weeklyprovisionalfiguresondeathsregisteredinenglandandwales>) and it includes deaths in England and Wales that occurred up to the end of week 44.

So we compared those stats against the deaths to have occurred between week 38 and week 44 in the ‘Five year average weekly deaths by sex and age group, England and Wales: deaths occurring between 2015 and 2019’ dataset previously published by the ONS, which can be found [here](#) (<http://Five.year.average.weekly.deaths.by.sex.and.age.group.England.and.Wales:deaths.occurring.between.2015.and.2019>).

30

The above chart shows the cumulative number of deaths between week 38 and week 44 for 2021 among children aged 10-14, as well as the five-year-average cumulative number of deaths between week 38 and week 44 among children aged 10-14.

As you can clearly see, there were more deaths in 2021 among children since the first week they were offered the Pfizer Covid-19 injection. Sadly by the end of week 44 in 2021, a total of 52 deaths had occurred, compared to 36 deaths by the end of week 44 in the five-year-average dataset.

AS WE HAVE PREVIOUSLY REVEALED THERE WAS ALSO A SIGNIFICANT INCREASE IN DEATHS AMONG MALE CHILDREN (<https://analysis-of-official-data-available-from-the-office-for-national-statistics-shows-that-deaths-among-female-children-increased-by-57%-against-the-five-year-average-immediately-after-they-were-first-offered-the-covid-19-vaccine/>) SINCE THEY WERE OFFERED THE JAB WITH THE FIGURE FLUCTUATING WEEKLY.

SO WE DECIDED TO TAKE A LOOK AT DEATHS AMONG FEMALE CHILDREN INSTEAD TO SEE IF THERE WAS A NOTABLE INCREASE IN THE NUMBER OF DEATHS AGAINST THE FIVE-YEAR AVERAGE, AND UNFORTUNATELY WE DISCOVERED THAT THINGS GOT SIGNIFICANTLY WORSE BY THE WEEK.

JUST 22 DAYS LEFT TO SAVE THE EXPOSE AND KEEP US ONLINE NEXT MONTH – Less than 0.1% of our readers support us, but if every one of you reading this kindly supported us today we could expand, keep going for another year, and remove this annoying banner... 30

The above chart shows the cumulative number of deaths between week 38 and week 44 for 2021 among female children aged 10-14, as well as the five-year average cumulative number of deaths between week 38 and week 44 among female children aged 10-14.

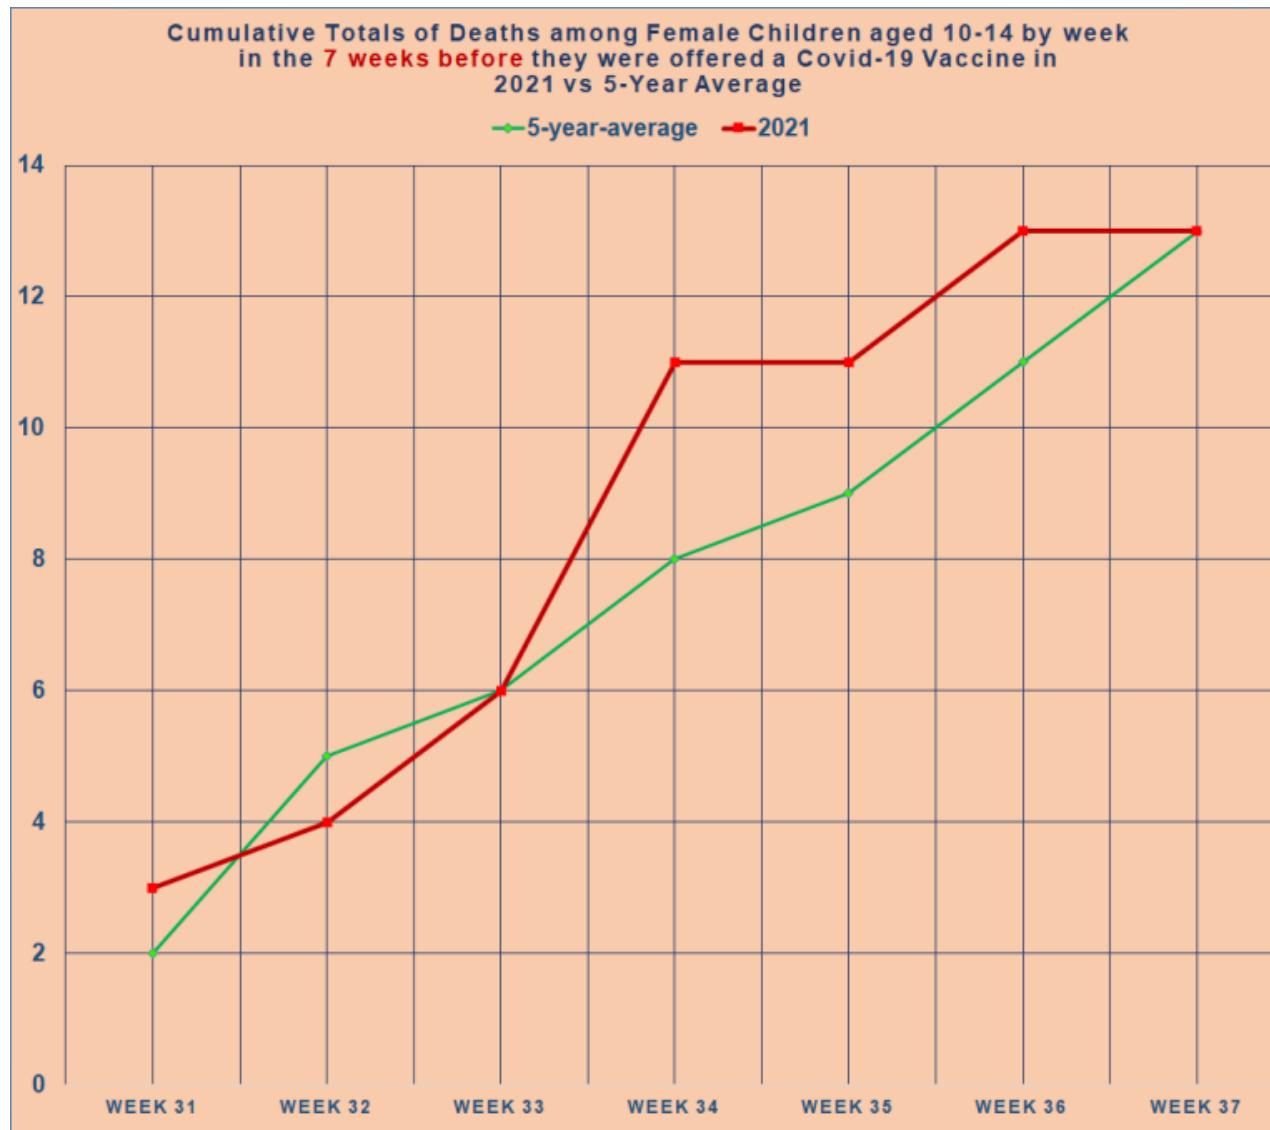

It shows that again from the very first week that children were offered the Covid-19 injection, deaths among female children were higher than the five-year average, but not by a large amount. However, weeks 39, 40, 43, and 44 saw a much more significant increase in the number of deaths among female children compared to the five-year average.

JUST 22 DAYS LEFT TO SAVE THE EXPOSE AND KEEP US ONLINE NEXT MONTH – Less than 0.1% of our readers support us, but if every one of you reading this kindly supported us today we could expand, keep going for another year, and remove this annoying banner... This represents a 57% increase in deaths among female children aged 10-14 against the five-year average in the first six to seven weeks following children over the age of 12 being first offered a Covid-19 injection.

To make sure this wasn't a commonly occurring theme throughout the whole of 2021 we took a look at the number of deaths among female children aged 10-14, between weeks 31 and 37, the 7 weeks before they were first offered a Covid-19 vaccine, and this is what we found –

DO WE KNOW FOR A FACT THAT THE COVID-19 INJECTIONS ARE TO BLAME FOR A 57% RISE IN DEATHS AMONG FEMALE CHILDREN AGAINST THE FIVE-YEAR-AVERAGE?

No.

Do we know for a fact that the Covid-19 injections are not to blame for a 57% rise in deaths among female children against the five-year average?

No.

Would it be highly coincidental if the Covid-19 injections were *not* to blame for the rise in deaths when the rise began following their roll-out to children?

Yes.

Would it be highly coincidental if the Covid-19 injections were to blame for the rise in deaths when the rise began following their roll-out to children?

No.

Should authorities have paused the roll-out of the Covid-19 injections to children with immediate effect months ago until they had discovered why deaths among female children increased by 57% against the five-year average since the roll-out began?

Absolutely.

It has been established that anyone who has the Covid vaccines faces the eventual possibility of an early death, obviously over extending yourself physically and when bike riding, could be some of those factors.

My best take is, if you are still alive 5 years after taking your first mRNA vaccines, there is a strong possibility, that you will survive them.

That said, perhaps the vaccines are working very well, just as was intended from the outset, the vaccines were intended to reduce the human population by a significant amount, the excuse being global warming which does not fly now, we know that the earth's temperature has not increased for 50 years, according to a recent report and the Great Barrier Reef has refused to die as Richard Attenborough said it would, by now, nevertheless, death by mRNA vaccines continues and out of control.

Those who have died so far, according to Steve Kirsch are between 5 million and 12 million, but personally, world wide, my guess is 50 million and on a ratio of 1 death, 5 are injured from the mRNA vaccines (on average) that puts a probably injury basis of 250 million world wide so far – my take being they should have died from their mRNA vaccines, but for whatever reason, they did not – this time around.

We, as humans, look backwards, but we don't seem to be able to look forwards or predict the possible future we are looking towards, over the next 18 months to 2 years onward, from the date of the injected mRNA vaccines and my take on that is, the deaths will increase considerably as time passes, because once in, they can't be taken out and they will do whatever they do and that's that.

You see anyone advertising cures for the Toxic Spikes from the mRNA vaccines, don't be fooled, these people should prove their treatments work, with hands on proof of the spikes in peoples blood disintegrating and minute blood clots too – if there is no scientific evidence to support that – then they are selling snake oil and nothing is going to change your eventual outcome –

Excellent comment, thank you. Only quibble, David Attenborough, not Richard, he's the one responsible for the dinosaurs escaping and he was very good in the film The Sand Pebbles

aida

We can add that the same as some people died a year after with the strange long coil clots, there are also those that are declaring cancers at various and after differing durations post jab, due to immunity crashing. We surely will be seeing millions more die in the coming years.

Gundelp

[Reply to aida](#)

16 days ago

There was a lab analysis comparing the compounds and ratio of the ingredients of living blood and that blood clots, the weird, whitish ones – based on that it looks that they were highly conductive materials, aluminum, tin, etc. – 'collected' by the body, from the body to form clots. If I understood well it is something you are poisoned with heavy metals from food, chemtrails and due to the vax they stick together forming clots, slowly growing till it kills you if you are unfortunate and the clot is not removed in time.

Nice comment thanks. Just going on from it though; I do not think we have seen anything yet, because I think the “die-offs” are just the tip of the iceberg – mainly older, mostly pensioners may save the globalist parasites some pension payouts ...but what I believe / assume / guess we shall learn in our lifetimes is that these jabs were mainly intended as a sort of mass sterilisation of our kids and the younger generations.

The deaths will continue and get worse, but I do not think a few hundred million is their goal... we are talking more “population reduction” as opposed to the commonly stated depopulation. They are sick, evil psychopaths... end of.

Their not shy about their intentions... they want to cull the human race down to, and maintain a “Sustainable 500 million” people total. So were talking, what... at least 7 billion they plan to eradicate?

Good vs. evil

Now, as far the topic question goes.

.

The problem here in the US (and apparently the UK too), is that when a govt agency authorizes a vaccine for “age group X-Y”, this authorization is presumed by other officials that this means “medically indicated for age group X-Y”. It does not. Allowing the vaccines for any age group should only mean that physicians are then able to vaccinate persons in that age group based on medical need. Not everyone in the age group will have a medical need for the vaccine. In the case of the COVID vaccines, children are particularly **not** in medical need of vaccination. Vaccination is **not** medically indicated for most children. Why is authorization for use on them (or any other age group) treated as if it is the equivalent of a medical finding of “medically indicated”? They are not the same things!
