

Analysis of 13 months UK data shows "vaccines" cause more deaths for all age groups

The cure is worse than the disease

The inestimable team at the Expose have completed an analysis of official ONS data for age standardized mortality rates per 100,000 per age cohort for each of the unvaxxed and various dosages of the toxic injection.

As suspected, the cure is worse than the disease.

“This data is all very alarming. A poorly functioning vaccine should still have at least a small positive effect. A non-functioning vaccine should have no effect. Yet we see a negative effect in all age groups for both 1 or 2 doses taken ‘at least 21 days ago’, and it is

most cases the negative effect is quite large. The fact that the pattern is consistent and predictable, meaning it moves smoothly from month to month and age bracket to age bracket, gives even more credibility to the pattern.”

This ONS data set covered a 13 month period as injections were steadily rolled-out to the most elderly and infirm, then to the next oldest age cohort and so on.

Another 8 months of data to end September 2022 is needed immediately.

It is still to better analyse, understand and factor in is the validity of:

- the strategy of health authorities of every country in the world that deployed mRNA injections to NOT conduct independent clinical trials - before the deployment of EXPERIMENTAL injections of gene “therapies” on their unsuspecting and trusting populations - to verify US clinical trial (shoddy “warp speed”) results - this is possibly ILLEGAL, if not unethical and immoral
- the Drosten RT-PCR test to designate C19 cases at 30-40 amplification cycles when more than 24 cycles is known to produce false positive results of “presence” of the SARS-COV2 virus, not its infectiousness
- the impact such C19 “case” designations had on the duration of remaining life amongst 2-6 other co-morbidities (how much did the presence of SARS-COV2 actually shorten the lives of those infected when those that succumbed with C19 “present” had already lived 1-2 years longer than population life expectancy (see below also)
- the extensive use of DNR’s and Midazolam in the UK (and Remdesivir in the US) to terminate the lives (murder) those designated as suffering from C19 (practising of iatrogenic eugenics)
- the denial of alternative treatment protocols that involved the use of appropriate dosages of IVM and HCQ by the WHO and the health regulator. This DENIAL of alternative, off label treatments by inserting government OPINION into the doctor-patient relationship is probably ILLEGAL - if not unethical and immoral
- the role of politicians in interfering in doctor-patient relationships and the use of propaganda to divide the country, coerce experimental injections and justify the

criminality of the Hippocratic Oath, the Nuremburg Code and Helsinki protocols enshrined in international law

- the role of social media in enabling criminal government propaganda (by taking bribes), by denying free speech of the most qualified and experienced practitioners in the world on their platforms and the cost in human lives from such censorship

Tragically, even though all-cause mortality data ALREADY indicates the increased lethality of the injections compared to official C19 data THIS IS NOT THE END OF THE STORY.

Analysis done by the Expose indicates that the adverse event data WORSENER after January 2022 in the UK (visit its website for more). Whilst the 13 months to 31 January 2022 all-cause mortality data per 100,000 per age cohort is essential for appropriate analysis - the impact of injections over the rest of 2022 AND on all causes of death IN THE FUTURE is yet to be felt.

Co-morbidities are likely to balloon in the coming years, as will the costs of treatment (using big pharma drugs?). Today's serious adverse events are tomorrow's co-morbid patients. Health care costs globally could easily double every three years from their already bloated budgets. We have already seen life expectancy decline almost 3 years over 2020 (down 1.8 years) and 2021 (0.9 years) in the US.

My "back of the envelope" calculations indicate one death per 1,000 doses and around 160-240 serious adverse events per 1,000) that EXCEEDS the deaths and case rate of C19. These numbers could be far worse, given that countries like Germany could have an even higher under-reporting factor (as high as 70) than the 41 used on the back of my envelope and Europe's higher incidence of death and injury from injections reported to EUDRA than VAERS.

Keep in mind that official C19 cases and deaths could be inflated by a factor of around 20 by the false calibration and amplification cycles of the RT-PCR test by Drosten) C19. If this is true, the ratio of harms from C19 injections to C19 infections is twenty times higher than that calculated by the Expose.

Hats off to the Expose for fighting the good fight to save lives and reduce pain and suffering by engaging in “deep dives” on the data.

It appears that Covid was a two tiered biological attack.

Tier One - The Covid Virus

Tier Two - The Covid Vaccine

The results have been hundreds of thousands dead around the world, but the vaccine attributes can be passed on to human progeny, since the vaccine can be found in breast milk for babies. I suggest that this is just the first of further biological attacks.
