

The Pfizer way: produce the sickness, sell the cure

Pfizer's shots may cause myocarditis and blood clots, and Pfizer has drugs for that!

Prior to Covid Mania, it was somewhat common wisdom to receive claims advanced by major drug companies with necessary skepticism, especially drug companies with a track record of a **multi billion dollar fraud settlement**.

On Tuesday, Pfizer released its latest revenue numbers, with the drugmaker posting another quarter of massive revenues and profits granted through the taxpayer funnel.

Pfizer Reports More Than \$22 Billion In Revenue For Quarter Three, Driven By Government COVID Purchases

8:33 PM · Nov 1, 2022

53 Likes 23 Retweets

The drugmaker is set to end the year with an **estimated** \$100 billion in revenue, with around one-third of its government handout cash being net income. Additionally, almost all of its net income will have come from its mRNA experimental gene therapy shots and Paxlovid, the Covid-19 oral pill best known for its “Paxlovid Rebound” side effects.

Miracle cure it is not. Pfizer is already recommending your 5th and 6th doses for its once-claimed immunizing “vaccine” – the mRNA COVID shot – that doesn’t currently work. And now they’re pivoting to the subscription model.

[Hey The Dossier readers, please check out CrowdHealth, my new sponsor.

I’m a paying CrowdHealth customer and I just decided to partner with them to help fix the healthcare system.

You’re challenging the traditional status quo, then why are you still paying expensive insurance premiums?

Experience the freedom and affordability of cash payments and community-funded healthcare with CrowdHealth. Use promo code “DOSSIER” during sign-up for a special discounted subscription offer.]

In his sales call to shareholders, Pfizer CEO Albert Bourla made it clear that his company is moving to the subscription model in order to sustain revenues years into the future. If Pfizer was focused on its customer’s health, they have a strange way of showing it. For example, the company has completely discarded safety concerns, as its latest booster was infamously only **tested on mice**.

Over the course of 2021 and 2022, Pfizer’s failed mRNA experiments have met additional scrutiny. Most notably, these injections are now strongly associated with an increased risk for blood clots and myocarditis.

Joseph A. Ladapo, MD, PhD

@FLSurgeonGen

Today, we released an analysis on COVID-19 mRNA vaccines the public needs to be aware of. This analysis showed an increased risk of cardiac-related death among men 18-39. FL will not be silent on the truth. Guidance: bit.ly/3CIKF5f Press Release:

Myocarditis can cause the heart to weaken and it can lead to a condition called cardiomyopathy.

Lucky for you, if your Covid-19 vaccine caused cardiomyopathy, Pfizer has a pill for that!

Pfizer's Vyndaqel, the cardiomyopathy drug, **recorded** sales of \$602 million in the quarter, which is up a stunning 29% year over year. Why are so many more people buying this drug? That question alone should raise some eyebrows.

Anyway, did that 5th booster dose give you a nasty blood clot?

Well, you're in luck again!

Pfizer sells Eliquis to treat blood clots!

The anticoagulant medication **brought** in \$1.46 billion this quarter, up 15% year over year.

Pfizer is the perfect example of a company that has been rendered completely unaccountable thanks to its partnership with the U.S. government.

Of course, there is no evidence that Pfizer intended on making its patients sick with its failed mRNA "vaccines." However, it's become clear that Pfizer executives simply don't care about the dangers of its failed products.

Company executives routinely lie with impunity, and know they will not be held liable for their own words, let alone the countless vaccine injuries that their products have caused.

Over the course of Covid Mania, it has become clear that Pfizer will do anything to make a buck, even if that means leveraging vaccine injury incidents to turn harmed patients into perpetual cradle to grave customers.

Pfizer doesn't care about your health. They only care about the bottom line. It's time that more Americans awakened to this sobering reality.

22 billion. What the hell am I doing being a writer on Substack? I should be poisoning people with toxic pharmaceuticals for a living.

Oh, wait, I remember. I can sleep at night.
