Project Veritas on Wednesday night released explosive video of Jordan Trishton Walker, Pfizer Director of Research and Development, Strategic Operations, admitting the pharma giant is exploring ‘mutating’ Covid-19 via ‘directed evolution’ so the company can continue to profit off of vaccines.

“One of the things we’re exploring is like, why don’t we just mutate it [COVID] ourselves so we could create – preemptively develop new vaccines, right? So, we have to do that. If we’re gonna do that though, there’s a risk of like, as you could imagine – no one wants to be having a pharma company mutating f**king viruses,” Walker told the undercover Project Veritas journalist.

“Don’t tell anyone. Promise you won’t tell anyone. The way it [the experiment] would work is that we put the virus in monkeys, and we successively cause them to keep infecting each other, and we collect serial samples from them,” he said.

“Don’t tell anyone. Promise you won’t tell anyone. The way it [the experiment] would work is that we put the virus in monkeys, and we successively cause them to keep infecting each other, and we collect serial samples from them.”

Walker says that Directed Evolution is different than Gain-of-Function, which is defined as “a mutation that confers new or enhanced activity on a protein.” In other words, it means that a virus such as COVID can become more potent depending on the mutation / scientific experiment performed on it.

The Pfizer executive told a Veritas journalist about his company’s plan for COVID vaccines, while acknowledging that people would not like this information if it went public.

“You’re not supposed to do Gain-of-Function research with viruses. Regularly not. We can do these selected structure mutations to make them more potent. There is research ongoing about that. I don’t know how tha

is going to work. There better not be any more outbreaks because Jesus Christ,” he said.
