Here it is...

Project Veritas on Thursday released undercover video of Pfizer Director Jordan Trishton Walker sharing his concern about women's reproductive

health after getting the Covid vaccine.

Project Veritas **last week dropped a bombshell undercover video** of a Pfizer Director admitting the pharma company was experimenting with dangerous gain-of-function on Covid-19 in order to make more money on vaccines.

Project Veritas last Wednesday night released explosive video of Jordon Trishton Walker, Pfizer Director of Research and Development, Strategic Operations, admitting the pharma giant is exploring 'mutating' Covid-19 via 'directed evolution' so the company can continue to profit off of vaccines.

"One of the things we're exploring is like, why don't we just mutate it [COVID] ourselves so we could create – preemptively develop new vaccines, right? So, we have to do that. If we're gonna do that though, there's a risk of like, as you could imagine – no one wants to be having a pharma company mutating f**king viruses," Walker told the undercover Project Veritas journalist.

Now this...

Jordon Trishton Walker shared his concern over women's reproductive health after taking the Covid vaccine.

"There is something irregular about the menstrual cycles. So, people will have to investigate that down the line," Walker said to the undercover PV journalist.

"The [COVID] vaccine shouldn't be interfering with that [menstrual cycles]. So, we don't really know," he said.

“I hope we don’t find out that somehow this mRNA lingers in the body and like – because it has to be affecting something hormonal to impact menstrual cycles,” Walker added.

“I hope we don’t discover something really bad down the line,” he said. “If something were to happen downstream and it was, like, really bad? I mean, the scale of that scandal would be enormous.”
