It's Valentine's Day, and if you can believe it, the [Soros-funded harridans](#) who have been so badly thwarted in their desperate attempts to find love are still trying to cancel Revolver. We are extremely grateful and fortunate to be supported by our generous readership. [Subscribers](#) and [Donors](#) help Revolver weather any cancel culture storm. Buy a \$49 per year [Subscription](#) for yourself and for that special someone, and if you are able and willing to give more, don't hesitate to [make a recurring monthly donation](#) — whether it's \$1 or \$1,000, every bit helps. You can also now easily give the gift of a Revolver ad-free Subscription. Simply go to the [Subscribe](#) page and check the “gift” option. Don't be a cheap date! — make it an annual subscription.

[Eat This Not That:](#)

If you're under 50, listen up! Research shows cancer rates are on the rise for young adults and the alarming trend implies it could be a global epidemic. The study by researchers at Brigham and Women's Hospital in Boston, and published in the peer-reviewed journal Nature Reviews Clinical Oncology finds, “Over the past several decades, the incidence of early-onset cancers, often defined as cancers diagnosed in adults <50 years of age, in the breast, colorectum, endometrium, oesophagus, extrahepatic bile duct, gallbladder, head and neck, kidney, liver, bone marrow, pancreas, prostate, stomach and thyroid has increased in multiple countries.”

There's several theories why cancer cases are increasing in people under 50. “A lot of smart people are trying to figure it out,” Bhavana Pathak, MD, board certified hematologist and medical oncologist at MemorialCare Cancer Institute at Orange Coast Medical Center in Fountain Valley, CA tells us. “The obvious answers include people who are more sedentary, exercise less, and eat processed foods.”

Yes, diet and exercise are important, but is that really the reason for this particular sudden surge?

Perhaps, but Dr. Cole has another theory that's based on research he conducted.

He says biopsy results may explain the shocking rise in “mysterious” cancers.

He Explains that there is “Spike Protein” inside every single cancer cell.

“What's inside of every cancer cell? Spike protein. Every malignant B-cell has spike protein in it.”

A [paper written last year](#) by Peter McCullough, Stephanie Seneff, Greg Nigh, and Anthony M. Kyriakopoulos also found that mRNA vaccines could potentially cause cancer, among other things.

mRNA vaccines promote sustained synthesis of the SARS-CoV-2 spike protein.

The spike protein is neurotoxic, and it impairs DNA repair mechanisms.

Suppression of type I interferon responses results in impaired innate immunity.

The mRNA vaccines potentially cause increased risk to infectious diseases and cancer.

Codon optimization results in G-rich mRNA that has unpredictable complex effects.

One Twitter user commented that he has ten family and friends who've been diagnosed with cancer over the past two years.

He said two of the cancers were "rare," and two were found by CT of some other body part.

He doesn't think this is a coincidence.

Can't blame him...

My wife and I had just both survived cancer before this Covid thing...We sure as he-ll weren't going to get the experimental jab with what some of the brave doctors were willing to say about it....Don't say we didn't tell you so jabbers....And many hospitals are refusing to do transplants or other serious operations if you're not jabbed...So much for the Hippocratic oath...It's why I don't trust doctors or hospitals anymore.

I don't blame you. I'll never trust Doctors, Pharma, Main Steam Media, Politicians, or Woke Universities (i.e. Harvard and their corrupt competitors) ever again. Oh..you should take the Shingles vaccine. I'm not interested. You should get your flu shot while your here. No thank you. You need a booster? Hell no!!!

5 0 Reply • Share >

Hey You → gman1234a

17 hours ago

Do you both get the flu shot? If so that's what probably caused your cancer to begin with.

My step father had heart surgery in Sept. through this he had all kinds of test before the surgery. He came out fine but in Oct he's PSI numbers hit the roof, he was diagnosed with cancer, he was dead in 3 months with cancer throughout he's body, died last Sunday. Of course he was vaxxed and fully boosted for the surgery.

Sorry for your loss but when I read stories like these, I have a hard time understanding how some in our society could be so evil.

The intent with covid and the vaccines was to maim but mostly to murder.

The only consolation I have is knowing these murderers are going to burn in hell!

father died last June. He also was dealing with some heart issues but suddenly got Lymphoma ing both Moderna shots and died within 3 months. He also lost his mental abilities within a matter of the hospital he could talk to us normal and with sharpness just as always and within a few weeks ced stage of alzheimers. They did brain scans and found no tumors and said they couldnt explain it. ossible vaccine side effects and the doctor went on to say with a smile "oh no its safe and effective lost impossible for me not to suspect the jab. Ill never trust doctors again!

There are no coincidences. And every non-coincidence points to the same trend/goal. Drastic reductions in human populations and fertility.

with a covid infection, when you get over the infection the spike proteins stop. The Vax modifies your DNA to produce spike proteins for the rest of your life..... what were they thinking?

And when you get COVID, the spike proteins that are released in your body (due to viral replication within your cells, which kills those cells) are attached to the viruses, and are not free-floating. When attached to a virus, the spike doesn't enter your cells, it just allows the virus to inject its RNA payload into the cell. OTOH, the jabs induce your cells to produce free-floating spike protein (and this does not kill those cells, so they continue to produce spike protein until they are eventually killed by your immune system). It is the free-floating spike protein that causes the problems that are exclusive to spike protein production, and not to viral replication. Only the jabs do this.

You can prevent the mRNA shot. It doesn't stop you from getting Covid, or spreading it (i.e. it doesn't work as advertised). So isn't it just better to take your chances with getting Covid? Seems like it.

of course. that is the logic normally of drug approval. safe and ineffective--who cares? ineffective and unsafe = end of drug regardless of how much it may help some cases. but we are now in bizzaro world.

My friend just buried her husband on January 5th. He had a full physical at the VA, everything was fine, then three months later he had a lot of pain in his back so he went to the doctor, tests showed a tumor the size of a grapefruit on his spine, he was full of cancer. He was diagnosed with Stage 4 cancer. Three weeks later he was dead. He and his wife got the initial "poisonous" jab, no boosters.

I have heard the life expectancy of a fully vaccinated person is 5 yrs so the clock is ticking, soon we will have a global die off. Lets hope there are enough purebloods around to clean up the mess they are going to leave.

I think there are many in the poorer, tropical regions, where the vax wasn't widespread for many reasons; they also have easy access to ivermectin.

It should be apparent to everyone paying attention that this entire "Covid" thing is a tool to inflict GENOCIDE upon the population.

When the so-called "virus" (actually a bioweapon) didn't result in as many deaths as TPTB wanted, they chose another bioweapon (the mRNA gene therapy) to finish the job.

And we're enduring that process at present, which is why we're seeing an epidemic of cancers, heart disease, and "died suddenly".

If you disagree, please tell me what I have wrong. But keep in mind we have many enemies (WEF) that openly state their goal to reduce the population!

Most if not all cancer is caused by microparasites.

Ivermectin has powerful anti-tumor effects, including the inhibition of proliferation, metastasis, and angiogenic activity, in a variety of cancer cells

Recently, ivermectin has been reported to inhibit the proliferation of several tumor cells by regulating multiple signaling pathways. This suggests that ivermectin may be an anti-cancer drug with great potential.

Here, we reviewed the related mechanisms by which ivermectin inhibited the development of different cancers and promoted programmed cell death and discussed the prospects for the clinical application of ivermectin as an anticancer drug for neoplasm therapy.
