Dr. Peter McCullough — Look out for mRNA in milk supply...

Posted by Kane on April 13, 2023 5:45 am

NEWS JUNKIES -- CHECK OUT OUR HOMEPAGE

Emerald Robinson with Dr. McCullough: Pandemic Ends, mRNA in Milk, Project NextGen

Discussion of mRNA in food supply begins at 5:50

To be clear, **this is not mRNA from the Covid Vaccine**. These are a variety of disease vaccinations given to cows, pigs, used in crops, that all utilize mRNA technology in their vaccine delivery mechanism.

Again, **these are not Covid Vaccines** in the food supply. These are **other types** of mRNA vaccines, specific to the animal or crop. These vaccines have existed for decades — what is new is the use of mRNA to deliver the vaccine.

And as Dr. McCullough describes, new studies show that the **mRNA in food can cross the digestive epithelial wall** and enter the bloodstream, and the **body then creates an antibody response** to the mRNA.

The Absolute Truth with @EmeraldRobinson  
@AbsoluteWithE · [Follow](#)

Is MRNA being injected into our food supply?

We asked Dr. Peter McCullough ([@P_McCulloughMD](#)) for answers.

Though we eat natural mRNA every day of our lives (plant, animal and bacterial).

🕒 April 13, 2023 1:26 pm

Czar Pinky

FDA is just like Biden. Bought and paid for.

Why is this never on the news? The same companies that make that “vaccine”, make those medications that are a huge percentage of the commercials during a “news” show. Producers know not to bite the hand that feeds them.

🕒 April 13, 2023 12:58 pm

Bannon 👍

To be even more clear mRNA are not “vaccines”. Never were. Never will be. It’s genetic manipulation.

GrumpyGrandpa

My fellow Americans! If you think you have a government that gives a spit about your life or the lives of your loved ones; YOU ARE WRONG! The government and corporate CEOs view the American citizens as a herd of chickens and they are the farmers worried about profits. They need to manage your feed along with their need for profits. They look at your standard of living and wonder if they will be able to keep up with the Farmer Jones down the road. They have heard from farmer Schwab who runs the WEF Farms in Austria, that it’s best to send the herd (YOU) to the slaughter-house, sell the farm and come work for him. As long as they don’t have to eat the bugs, take the Spike Proteins, and get their kids indoctrinated, THEY COULD CARE LESS!

Why haven't these people asked us.....the public if we want that garbage tainting our food supplies?

I don't give my ok!!! 😞

Reply

🕒 April 13, 2023 11:24 am

Eleven Bravo

This madness has to stop, and it has to stop right now.

None of the agencies / lawmakers have any credibility left to sit around and tell us not to worry, or pass bills to "protect" us.

"Banning" mRNA in food supplies (via some worthless, ignored bill / law) will not work, as we circle back to the fact that ...

None of the agencies / lawmakers have any credibility left ...

I still cannot believe so many fellow Americans are content to know, or care about .. nothing.

For those that haven't tried it wild pig (I prefer young boars taste wise) is better than pork....absolutely delicious and very little fat. Also Free...most farmers are happy to have you take a few (or more) off their land. Just ask

politely. Or check with a local hunting club...

👍 16 👎

[Reply](#)

🕒 April 12, 2023 11:23 pm ^

Mr. Scott

I have to reply to this.. I support kill wild hogs... Eating them.. I'm not so sure. I heard a story about a man killing a coyote. Two days later returns to the dead coyote and finds a wild hogs eating a 2 day old coyote. I was off the fence... Only Beef for me. Cows and calves don't eat dead coyotes. Chickens are about as nasty.

Prester Kahn

Sure – pigs, wild or domestic, are omnivorous, just like we are, although without any of our self-imposed guidelines. They will eat just about anything. Unmonitored they can carry trichinosis and other parasitic diseases. Which is where the old guidance about having to cook pork well done came from, since those parasites will live just as happily in us as the pigs.

Dr. McCullough – can you get sample of dairy products from a farmer that admits to using these vaccines? We need someone to test some samples – ie – is regular milk more dangerous than powdered milk vs. UHT milk?

What about butter? Is it "safe" if melted or used in cooking – like cakes and breads?...same question about buttermilk, sour cream, and things like yogurt and kefir...

You are in a position to find these details out – we wouldn't be thrilled about switching to oat milk – or powdered milk, if it is deemed safe from transfer of any spike proteins....please see if you can do these tests to help everyone!

👍 44 👎

[Reply](#)

🕒 April 12, 2023 9:54 pm ^

Prester Kahn

They were quite clear that the mRNA vaccines being discussed did NOT include the Covid one. Since the spike protein is only associated with Covid, your worry on that score is unfounded.

Not to say that what the other RNA encapsulated in the animal vaccines is perfectly safe in the human body, however.

EAT, DRINK, AND BE MERRY. They are going to kill us one way or the other it seems. It is starting to feel like we are sitting ducks on a pond.

I bought a box of Nabisco Graham Crackers yesterday and I just looked at the ingredients. The label lists the common things you expect to see and then there is a space below those where it says "contains a BioLife" ingredient. Is this the mRNA? I intend to call them tomorrow.

👍 24 🗨️

This will lead to more “autoimmune” disease, already at crisis levels. Strange no media to speak of, though note pervasive—and increasing—advertisements for all manner of drugs aimed at “plaque psoriasis” “eczema” “dermatitis” these are external or “ulcerative colitis” or “Crohn’s” these are GI tract insides. ALL are autoimmune disorders where your immune system attacks your own tissues. The mRNA will do the same. Much of this can be attributed to GMO corn and massive “RoundUp” herbicide getting into everything, they even use it to dry the grain post-harvest. Some people (like the scientists at the censored website BioInitiative.org) think pervasive 5G transmission is triggering these conditions as well.

More sabotage. Huge plastic fire in Indiana too. This is so painfully obvious it's unbelievable. The FBI is targeting Catholics who want to hear a Latin Mass and nobody has a clue who is setting fires and derailing trains. BTW 2 Antifa gals were caught in the act derailing a train in Bellingham Wash. in Dec 2020 after 41 prior episodes in that area. One already plead guilty and the other found guilty by jury. Ignored by MSM. It goes on:

🕒 April 12, 2023 9:19 pm ^

Seagypsy3939

No. It's like the mrna cell takes over your own cells, they think for themselves and are biotech, like triggered with 5G. It causes your cells to attack themselves. Autoimmune..

It also makes you magnetic. No lie, you can put a magnet to the meat and it will pick it up. And you can stick it to your own body! Sick isn't it! You just can't grasp it all. That's why I just TRUST IN GOD AND REMEMBER JESUS SAID, BE NOT AFRAID!. in the bible it says those words 365 times!!!!! ♥️🙏🙏🙏

They're now coming for your food. UCR's Department of Botany and Plant Sciences who is leading the research explained in a press release published by the university on Sept. 16, 2021

You may recall that researchers at the University of California were awarded a \$500,000 grant from the National Science Foundation to develop technology that infuses experimental mRNA Covid-19 vaccines into spinach, lettuce, and other edible plants, as reported by The Gateway Pundit last year.

The team of nanobiotechnology experts is currently working on successfully delivering DNA containing mRNA BioNTech technology into chloroplasts, the part of the plants that instruct its cells' DNA to replicate the vaccine material.

The researchers are tasked with demonstrating that genetically modified plants can produce enough mRNA to replace Covid jabs and infuse the plants with the right dosage required to eat to replace vaccines.

Experimental mRNA vaccines will be edible, Juan Pablo Giraldo, an associate professor in UCR's Department of Botany and Plant Sciences who is leading the research explained in a press release published by the university on Sept. 16, 2021.

"Ideally, a single plant would produce enough mRNA to vaccinate a single person," Giraldo said. "We are testing this approach with spinach and lettuce and have long-term goals of people growing it in their own gardens."

Millions of people who have refused to get an experimental mRNA vaccine may soon be forced to consume the gene therapy in their food.
