Red Flags National Digital ID System

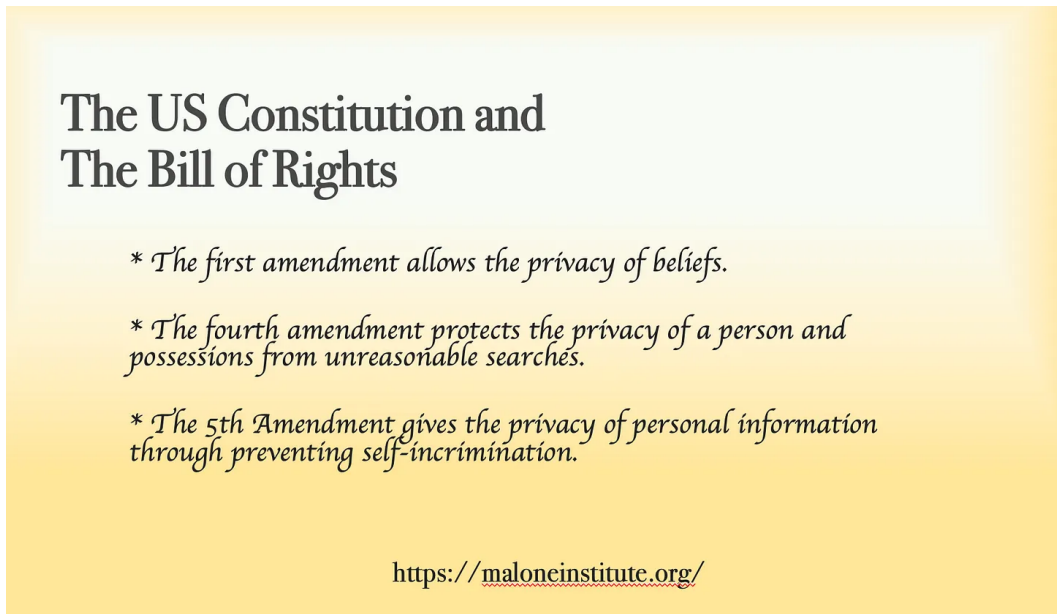

For more information: <https://maloneinstitute.org/nationalid>

The National Digital Health ID is being implemented by the Federal Office of the National Coordinator for Health Information Technology.

Most US Citizens have no idea it is being implemented.

The National Digital Health ID system is in direct conflict with the US Constitution Bill of Rights.

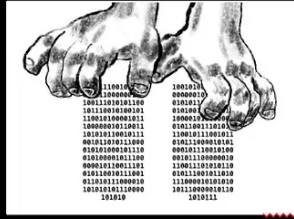

**The US Constitution and
The Bill of Rights**

- * The first amendment allows the privacy of beliefs.*
- * The fourth amendment protects the privacy of a person and possessions from unreasonable searches.*
- * The 5th Amendment gives the privacy of personal information through preventing self-incrimination.*

ONC National Digital Health ID

US ONC is the Office of the National Coordinator for Health Information Technology

US ONC has launched the National Digital Health ID.

They have mandated all states to maintain a health information exchange (HIE).

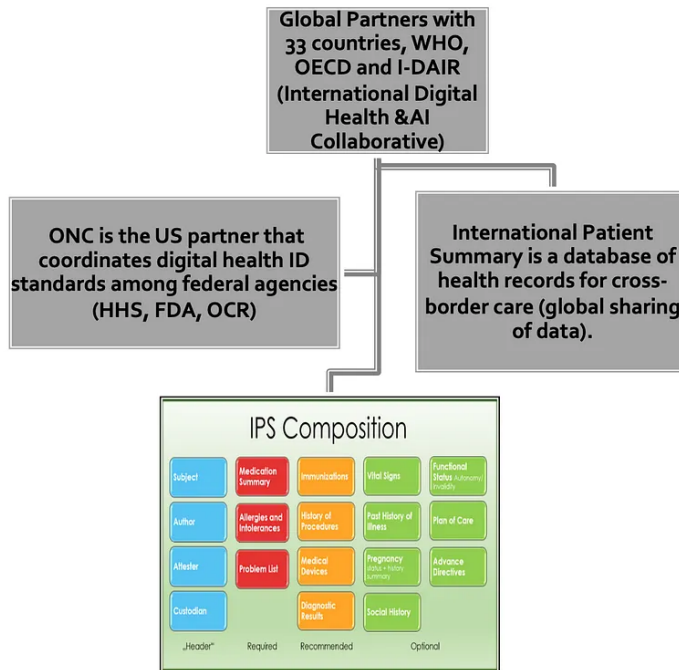

An HIE is a cloud data system.

ONC can track SDOH (social determinants of Health) that include your neighborhood, job, income, hobbies, food, activities, education

All licensed healthcare providers and organizations are mandated to upload full medical records of all patients to the HIE.

Your medical records are valuable data

For more information: <https://maloneinstitute.org/nationalid>

What about HIPAA?

Business Associate Agreement (BAA)

For more information: <https://maloneinstitute.org/nationalid>

What is Informed Consent?

Written or verbal (in emergencies) permission.

Authorization to release protected health information (PHI) to a specific provider, for a specific purpose, with the minimal necessary specific information.

BAs for HIEs bypass citizens' informed consent, confidentiality and medical privacy rights.

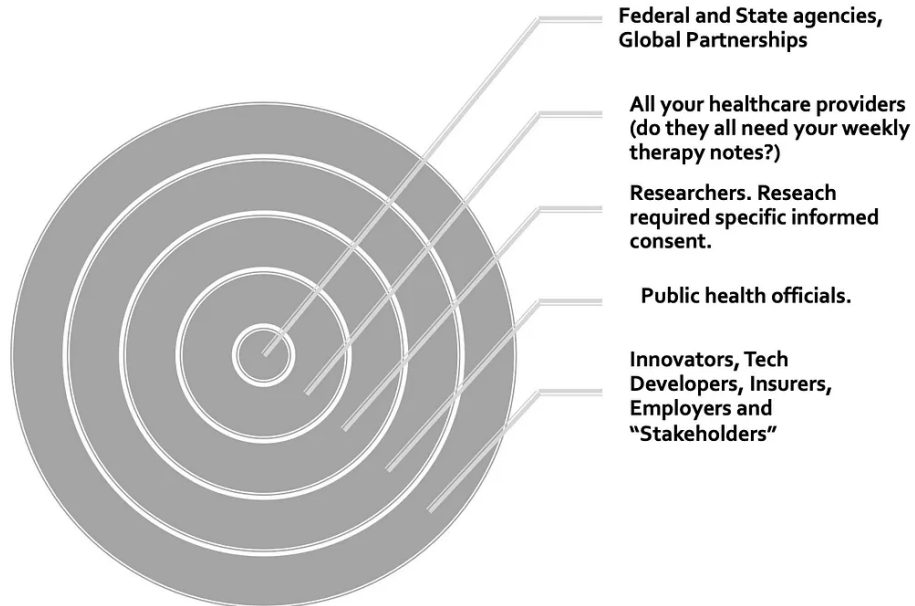

This is highly unethical and violates provider licensing requirements for confidentiality.

HIE won't inform who your data is released to, sold to (they call it "fees & cost shares"), how it's used, it's not minimum necessary, it's not requested, and not de-identified.
