

Exclusive: Video interview with 3 experts reveals evidence that the drug companies knew about the SV40 promoter, yet decided to conceal it from the regulators

It's OK with the regulators when they are deceived like this. Health Canada did nothing when they found out they were deceived. Not a single health authority is warning the public.

My [Rumble interview](#) with Kevin McKernan, Professor Byram Bridle and Chris Martenson was just posted:

Topics covered in the video include:

1. what is the probability of **IRREPARABLE** harm,
2. why these experts all believe that the vaccine is adulterated,
3. the evidence that the drug companies **DELIBERATELY** concealed the presence of the **SV40** promoter sequence from the regulators (revealed here for the first time and it's really compelling),
4. how the drug companies cleverly avoided violating the contamination specs by using two **DIFFERENT** measurement techniques depending on what was being measured (the different techniques have different sensitivities and the regulators under-specified the requirements so the drug companies were clever)

5. **NOBODY** from the FDA, CDC, EMA, WHO, or every other health authority in the world have never contacted Kevin on his work since it was first published in April 2023

6. that Health Canada did ***NOTHING*** to stop the vaccines after admitting the vaccines contain an active ingredient that they were never notified existed and have no clue how damaging it is. **They aren't going to stop the vaccine, they aren't going to warn the public. And they certainly are not going to do the research into the harms being done. Nor will they even ask the drug companies to do the research. They are simply going to act like it didn't happen and make sure that the press doesn't write about it so nobody**

will know. They just want the whole mistake to go away and their hope is by ignoring it, it will just “disappear.”

7. how NO health authority in the world is even asking the drug companies any questions like "So, who removed the SV40 promoter label from the diagrams and why did they do it?",
8. that none of the regulators asked any questions as to "why is *THAT* in there" (the vaccine has lots of things that are in there to do medical research because it appears they used an off-the-shelf formulation used in research to rush to market faster),
9. the press is remaining silent (no one from the mainstream press, other than “fact

checkers,” ever talked to any of these experts)

10. why Congress isn't asking any questions,
11. what these experts think the FDA will do now,
12. how they think Pfizer and Moderna will extricate themselves (or not),
13. how serious the harms are,
14. how many labs has Kevin McKernan shipped his testing kit to,
15. why no health authority worldwide will fund the research as to whether or not this irreparably damages your DNA,
16. which media is covering this news,
17. why testing monocytes in blood is the best chance for finding a signal, but sperm and

semen may be the most telling

18. why pregnant mothers should NEVER NEVER NEVER take the COVID vaccine (it can mess up the DNA for both the mom and the unborn child)
19. how the CDC could possibly justify recommending the vaccine to pregnant women (short story: they can't possibly so that's why they'll never publicly allow themselves to be challenged)
20. how the experts think this will end

Breaking: You can now sue the mRNA COVID vaccine manufacturers for damages and the FDA is required to take the COVID vaccines off the market. Why? Adulteration. The plasmid bioactive contaminant sequences were NOT pointed out to the regulatory authorities. It's considered adulteration. I just got off the phone with Professor Byram Bridle and Dr. Robert Malone on this.

In other news...

Also, it turns out that the [VA paper I wrote about which accidentally revealed that neither the COVID vaccine nor the flu vaccine have a hospitalization benefit](#) also means that they have no death benefit either. Reason: the death benefit is always \leq the hospitalization benefit. So 0 hospitalization benefit \rightarrow 0 death benefit.

In short, both the **COVID and FLU vaccines** are duds for the elderly based on this VA data: they don't reduce hospitalization or death.

And if they don't work in the target market, what chance do you think they will have in younger people where any measurable benefit will be even smaller? That's right. 10% of zero is still zero, isn't it?

For more background on the adulteration

See ["OK, you were right. We admit the vaccine is contaminated with SV40, but we found some experts who think it's not a problem."](#)

That article has lots of background information on this topic.

Summary

The adulteration is a disaster. NOBODY knows how serious it is. The only way you can assess the harms is testing.

Yet no regulator is interested in finding out the answer! The press won't write about it . The regulators aren't asking the drug companies to investigate it either. Congress won't hold any hearings. The drug companies will do nothing. They are all simply going to ignore it and pretend that the problem doesn't exist.

The drug companies are now living on borrowed time.

In the meantime, the regulators, press, Congress, and mainstream medical community

will do nothing, and hope that they didn't make a huge mistake.

This is because it is the responsibility of the public to protect the public from the harms from their governments.

But we aren't standing still on our side. I expect we will have lab results in <30 days from now so the public will learn the truth.

If the data shows irreparable harm from these vaccines, then it's all over. The house of cards comes tumbling down. Trust in the regulators, the pharma companies, Congress, the mainstream media, and the mainstream medical community will evaporate.

We'll know the answer soon. Stay tuned... I don't think this is going to end well.
