New data from the U.S. Department of Defense (DOD) indicates a significant increase in heart issues among pilots, with **heart failure spiking nearly**

1,000% in 2022. Lieutenant Ted Macie, an active-duty officer with the U.S. Navy Medical Service Corps, raised concerns about the health risks associated with the COVID-19 shots, including heart-related ailments. The data, obtained from the Pentagon's Defense Medical Epidemiology Database, shows drastic spikes in various diagnoses for serious medical issues, prompting questions about the potential impact of the COVID-19

The findings have reignited discussions about the safety and efficacy of the vaccine mandate for military personnel. A 1000% increase in heart failures among pilots in just one year is cause for major concern. Why must we continually force service members to take these vaccines when we know they are likely unsafe?
