Largest Covid-19 vaccine study yet finds links to health conditions

- Study looked at medical problems among 99 million immunised people
- Small increases in neurological, blood, heart-related issues were found

Vaccines that protect against severe illness, death and lingering long Covid-19 symptoms from a coronavirus infection were linked to small increases in neurological, blood, and heart-related conditions in the largest global vaccine safety study to date.

The rare events – identified early in the pandemic – included a higher risk of heart-related inflammation from mRNA shots made by Pfizer Inc, BioNTech SE, and Moderna Inc, and an increased risk of stroke and heart failure following immunisation with viral-vector vaccines such as those made by the University of Oxford and made by AstraZeneca Plc.
