

# Biden Admin-commissioned report concludes Pfizer & Moderna mRNA shots cause myocarditis

An exhaustive review of the evidence establishes a causal relationship between mRNA shots and myocarditis.

A new report published this week from the [National Academies](#) concluded that there is a direct relationship between COVID-19 vaccines and myocarditis, a disease that causes inflammation of the heart muscle.

The report, titled, Evidence Review of the Adverse Effects of COVID-19 Vaccination and Intramuscular Vaccine Administration (2024), marks the first time that a government commissioned report has acknowledged the direct association between Pfizer and Moderna's mRNA shots and myocarditis.

While this might not be groundbreaking news to those who have long challenged the extensive “safety and efficacy” claims brought forward by proponents of the mRNA Covid shots, it’s particularly interesting because the report was sanctioned by the Health Resources and Services Administration, which falls under the umbrella of the U.S. Department of Health and Human Services (HHS).

The 314 page report concluded that there was insufficient evidence to demonstrate a causal relationship (a direct cause and effect) for a variety of potential harms, but did conclude that there is a direct causal link between the mRNA shots and myocarditis.

## Myocarditis, Pericarditis, and COVID-19 Vaccines

This chapter describes the potential relationship between COVID-19 vaccines and myocarditis and pericarditis (see Box 7-1 for all conclusions in this chapter).

### BOX 7-1 Conclusions for Myocarditis and Pericarditis

**Conclusion 7-1: The evidence establishes a causal relationship between the BNT162b2 vaccine and myocarditis.**

**Conclusion 7-2: The evidence establishes a causal relationship between the mRNA-1273 vaccine and myocarditis.**

As you can see in the screenshot from the report above, their conclusions assess that the evidence establishes a myocarditis link to both the Pfizer BioNTech (BNT162b2) Covid-19 vaccine and the Moderna Covid-19 (mRNA-1273) vaccine.

“In patients with vaccine-associated myocarditis, elevated levels of spike protein were detected in their blood and on myocardial tissue,” the report reads. “Studies in animal models and *ex vivo* human samples show a connection between myocarditis and the activation of specific immune pathways ... triggered by mRNA COVID-19 vaccines.”

Now, the report only studies myocarditis resulting from the \*first two mRNA Covid shot doses.\* This report does not even get into the potential negative implications of the endless booster shot protocol, though it does cite studies that show there is a substantially increased risk of acquiring myocarditis from dose one to dose two.

Nonetheless, in February of this year, the CDC’s vaccine review panel authorized the ninth mRNA dose for loyal Followers of the Science.

### Dose number NINE: CDC panel green lights yet another Covid mRNA shot

JORDAN SCHACHTEL · FEB 29

[Read full story →](#)

Neither Pfizer nor Moderna have ever claimed to resolve the myocarditis issue with their injections. Nonetheless, government regulatory bodies continue to rubber stamp approval for the latest “booster” shots from Pfizer and Moderna, despite the increasing risk of acquiring myocarditis with every additional shot.

In justifying the increased risk for adverse events, advocates for the shots frequently advance the notion that acquiring myocarditis from mRNA vaccines is more rare than acquiring it from a coronavirus infection. This leads uninformed consumers to conduct an improper risk-benefit analysis, because there is no evidence that the shots prevent infection

J Do Covid vaccines cause myocarditis?

✦ The connection between COVID-19 vaccines and myocarditis is a complex issue that is still being studied. There have been rare cases of myocarditis reported after receiving a COVID-19 vaccine, particularly among young men. However, the risk of myocarditis from COVID-19 vaccination is much lower than the risk of myocarditis from COVID-19 itself.

Google's woke AI engages the risk-benefit fallacy

In just three year's time, we transformed from the narrative of a "safe and effective" miracle cure to an admitted toxic agent that does nothing to resolve the Wuhan sniffles.

Then the shots should immediately be withdrawn, if not then a BIG warning label should come with the shots. Patients should be required to sign a consent form acknowledging that they received and understood the potential danger before accepting the vaccination

Did the manufacturers know? (I think they did.)

Did the agencies approving the jab know? (They may not have, initially, but I'd put that as 50/50 at best.)

And from whom should those injured seek reparations and damages?

I hope there are people in multiple jurisdictions able and willing to take this to the courts, if only to create a paper-trail and make it common knowledge.
