Cancer Doctor Issues Urgent Warning

There is a “fundamental flaw” with the COVID-19 mRNA shots.

Published 18 mins ago on April 19, 2024
By Vigilant Fox

The mRNA COVID-19 shots “should be completely banned! If they’re going to be used for anything, it has to be what they are, gene therapies,” says renowned oncologist and professor Angus Dalgleish, known for his research in cancer and HIV/AIDS.

In an [interview with Dr. John Campbell](#), Dalgleish declared there is a “fundamental flaw” with COVID-19 shots, and the flaw is that **“it carries on for an indeterminate period of time.”**

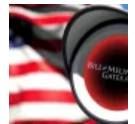

What that means is the modified mRNA containing N1-methyl-pseudouridine (m1Ψ) allows the mRNA in the COVID shots to last in the body for an indefinite period of time, leading to an uncontrolled amount of spike protein production.

The bottom line: There is a great likelihood that the shots are causing cancer.

- Spike protein inhibits the activity of tumor suppressor genes.
- Spike protein interferes with BRCA, which keeps ovarian and breast cancer in check.
- The N1-methyl-pseudouridine (m¹Ψ) in itself leads to immune suppression. Without the immune system working in full force, it creates conditions conducive to rapid cancer growth—or what some people refer to as “turbo cancer.”

As such, Prof. Dagleish says:

“You should never use them [mRNA shots] in the general population as vaccines because they’re not.”

“They [COVID shots] should be completely banned!”
