

The Government of Canada is Betting \$36 Million Taxpayer Dollars That Vaccines Are Not Entirely Safe

DR. BYRAM W. BRIDLE

It has been two years, eight months, and twenty-six days (999 total days) since the administration of my employer, the University of Guelph, locked me out of my office and laboratory. I spoke truths about COVID-19 when much of the world was not ready to hear them. As the University of Guelph still expects me to work, I would like to have access to my work spaces. My administration keeps sharing their policy stating that I should feel valued in my workplace; I don't.

The Canadian Independent does great, grassroots investigative journalism.

In this [article](#) from yesterday, they pointed this out in the Government of Canada's 2024 budget...

Chapter 2

Lifting Up Every Generation

millions of dollars

	2023- 2024	2024- 2025	2025- 2026	2026- 2027	2027- 2028	2028- 2029	Total
Additional Investments – Lifting Up Every Generation	0	23	21	4	4	4	55
Vaccine Injury Support Program	0	19	17	0	0	0	36
Funding proposed for PHAC for the Vaccine Injury Support Program.							
Travelling Public Program	0	5	5	5	5	5	22
<i>Less: Costs to be Recovered</i>	0	-1	-1	-1	-1	-1	-5
Funding proposed for PHAC for the Travelling Public Program to uphold sanitary standards on federally regulated passenger transportation.							
Chapter 2 - Net Fiscal Impact	0	1,404	2,036	2,048	2,344	2,719	10,550

Note: Numbers may not add due to rounding. A glossary of abbreviations used in this table can be found at the end of Annex 1.

...**\$36 million** Canadian taxpayer dollars are being budgeted over the next two years for the [Vaccine Injury Support Program](#) that was initiated by the Public Health Agency of Canada alongside the rollout of COVID-19 shots. I confirmed that this table can be found on page 135 of the budget.

Why is so much money being allocated to this?

All I have ever heard from public health and government officials, legacy media, and many scientists and physicians, is that Canada's vaccines are "safe", period, full stop. I have heard this many thousands of times over the past few years. More recently, there have been growing murmurs that there might be extremely rare side-effects that tend to be transient.

So, why would a vaccine injury support program need infusion of \$36 million dollars for what is essentially a non-issue?

With a federal election coming up in 2025, there has been a painstakingly long and drawn out series of political announcements about the budget. These are designed to make various Canadian demographics feel particularly valued.

Why didn't massive investment into the Vaccine Injury Support Program make the cut for election-promoting messaging? Why the deafening silence from the extremely loud narrative pushers when it comes to this line item?

Here is what really concerns me...

The Vaccine Injury Support Program [started](#) on June 1, 2021.

By the end of 2022 (~1.5 years from its inception), [\\$2.8 million](#) was apparently paid out by the program...

British Columbia

\$2.8 million paid out so far by Vaccine Injury Support Program

Claimants express frustration over how long the agency in charge is taking to process claims

Karin Larsen · CBC News · Posted: Jan 06, 2023 7:32 PM EST | Last Updated: January 7, 2023

Ross Wightman experienced paralysis and was diagnosed with Guillaine-Barré Syndrome shortly after his first dose of the AstraZeneca COVID-19 vaccine. (Submitted by Ross Wightman)

One year later, the payouts had apparently accumulated to ~\$11.2 million...

Canada's new vaccine injury support program surpasses \$11.2 million in payouts; new figures show

Now, \$19 million is budgeted for the next year.

So, let's review...

\$2.8 million was paid out in the first 1.5 years; the next year (2023) saw \$8.4 million paid out; it is expected that \$19 million will be needed for the next year.

\$2.8 million to \$8.4 million to \$19 million.

WHAT HAS HAPPENED OVER THE PAST FEW YEARS THAT WOULD WARRANT A MORE THAN EXPONENTIAL INCREASE IN FUNDING FOR VACCINE INJURIES?

As a vaccinologist I do not like where this is heading. What the government has been saying and where they are putting their money aren't aligning well. These kinds of issues can cause people to become vaccine hesitant.

I am hoping that readers will use the comments section to educate me about why the Vaccine Injury Support Program is requiring so much money.

They should be budgeting billions, not millions!

I have a client who has made a claim. While I could strongly sense the adjudicators of the claim were trying to pay out as little money to my client as possible, they did approve my client's claim because if they had not, their bias would have been revealed too much. There are just so many injuries that cannot be denied too much without creating a worse PR nightmare. So, significant funds must be allocated to pay at least some of these people out. The value of the COVID vaccine injuries in this country is easily in the billions. If VISP pays out even a small portion, it will run into the hundreds of millions, I expect.
